MSc REPRODUCTIVE MEDICINE: SCIENCE AND ETHICS

Canterbury
With between one and two percent of all UK babies being born by IVF, reproductive medicine is one of science’s growth industries. It’s an area in which the UK is world-leading and the University of Kent is one of the few centres in the country with active cutting-edge research in the science, ethics and law of this fascinating field.

About the programme

The MSc in Reproductive Medicine: Science and Ethics has been designed for students who wish to gain an advanced education and training within the context of a medical issue that affects one in six couples wishing to start a family.

Taught by leading professionals in the field, this programme provides you with a deep and broad overview of the modern practice of reproductive medicine. Through a combination of lectures, small-group seminars and interactive laboratory-based sessions, you gain the practical, academic and research skills that are used in academia and the clinic, and learn how these can be applied to the development of new therapies.

The programme culminates with an individual research project or dissertation on a specific aspect of reproductive medicine research that interests you most.

Course content

- The IVF World
- Practical Skills in Molecular Biology for Reproductive Scientists
- Reproduction and the Beginnings of Life
- Science@Work
- The Science of Reproduction
- Project/Dissertation

Assessment

Assessment is by examination, coursework and the project or dissertation.

Expert teaching

The programme is taught by world-leading academics at the University of Kent and leading industry practitioners from the London Bridge fertility centre.

Who should apply

This programme will be of interest to prospective clinical embryologists, clinical scientists, individuals wishing to enter a career as a research or clinical scientist in reproductive medicine, and individuals seeking a research career in reproductive medicine. Part-time applicants welcome.
