SP801		Statistics and Methodology				
Version	Campus	Term(s)	Level	Credit (ECTS)	Assessment	Convenor
2	Canterbury	Whole Year	M	40 (20)	100% Coursework	Giner-Sorolla Prof R

Contact Hours

Weekly three-hour lecture-workshops, weekly computing surgeries.

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. descriptive and inferential methods;
- 8.2. 8.2. Comprehensively understand the fundamentals of scaling and methods used for measuring psychological variables;
- 8.3. 8.3. Demonstrate a systemic understanding of the concepts of statistical model and model testing;
- 8.4. and test structural equation models;
- 8.5. settings;
- 8.6. 8.6. Systematically evaluate the appropriateness of statistical analysis methods to research design and data;
- 8.7. 8.7. Effectively communicate results of statistical analyses orally and in writing.
- 8.8. 8.8. Demonstrate a systemic understanding of how to apply qualitative, correlational and experimental research methods

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1 Demonstrate an understanding of complex theoretical positions and controversies related to methodology;
- 9.2 Demonstrate an appreciation of the diverse applications of statistics and its relevance to students' fields of study and social sciences more broadly.

Method of Assessment

Students complete two sets of examinations, each accounting for 50% of the final mark.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Restrictions

Not Available Wild.

Synopsis *

This module provides a postgraduate-level orientation to both basic and advanced contemporary statistical and methodological issues in psychology. The methodological issues you consider include qualitative research methodologies; experimental, quasi-experimental, and correlational research designs in the laboratory and field; and the fundamental issues in psychological measurement including reliability and validity. The statistical techniques you learn include univariate and multivariate descriptive and inferential statistics; basic and advanced topics in ANOVA and ANCOVA; linear and logistic multiple regression; some scaling methods; classical test theory, factor analysis; fundamentals of structural equation modelling (path analysis, confirmatory factor analysis, multiple-group analysis), and some item response theory.

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1. and educational settings)

8.2. 8.2. Demonstrate expertise in the design and implementation of different research and evaluation methodologies

8.3. 8.3. Show an appreciation of the theoretical and meta-theoretical issues involved in utilising a social psychological approach

8.4. individual and organisational level.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1. 9.1.1. Demonstrate writing and reading skills to present and interpret material with evidence of the use of relevant literature

9.2. 9.2. Show the ability to critically evaluate the quality of theory and method in published research

9.3. written form

Method of Assessment

100% Coursework

Preliminary Reading

Contact Hours

Total contact hours: 33

Private study hours: 167

Total study hours: 200

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1 Demonstrate comprehensive understanding of criminological theory regarding the origins of offending.

8.2 Demonstrate knowledge of techniques for the study of offender behaviour and its contribution to police work, through critical evaluation of current research and advanced scholarship in the discipline.

8.3 Demonstrate comprehensive understanding of rational decision-making as applied to crime and offences conducted by people who make non-normal decisions, e.g. psychopaths, sex offenders.

8.4 Form a conceptual and systemic understanding of the reality of the functions of different parts of the Criminal Justice System through attendance on course visits.

8.5 Explain to the public, using plain English, how offenders and victims of crime are dealt with by the Criminal Justice System.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1 Demonstrate intellectual and subject-specific skills (include critical thinking and argumentation, reasoning and reflection, information structuring, analysis and synthesis, application of theory, appropriate use of sources, and clarity in thinking)

9.2 Demonstrate key transferable skills, including communication and information technology (e.g. undertaking online research, producing written documents), working with others, problem solving, and improving learning (including time management and exploring personal strengths and weaknesses).

Method of Assessment

100% Coursework.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Synopsis *

This module examines the topic of criminality from a broad psychological perspective. The origins of the criminal tendency in childhood are detailed and its abundant expression in adolescence highlighted and examined. You consider the evidence that consistent criminal tendencies can be reliably assessed and evaluate the extent to which personality factors can explain that consistency. The concept of psychopathy is explored along with the relationship between crime, law and moral judgement. The role of victims in creating, defining and reporting crime is analysed, and the psychological consequences of crime for victims and potential victims are explored.

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. 8.1. To allow students to gain a basic understanding of the criminal justice process;
- 8.2. the criminal justice process;
- 8.3. system
- 8.4. 8.4. To allow students to understand the psychological effects of criminal justice processes on suspects/defendants.
- 8.5. Magistrates and Crown Courts.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. 9.1. Evaluate the potential effects of criminal justice processes on stakeholders and suspects/defendants.
- 9.2. 9.2. Evaluate the role of forensic psychologists in the criminal justice system.
- 9.3. to Magistrate and Crown Courts.
- 9.4. 9.4. Identify and evaluate the roles of key stakeholders in the criminal justice systems

Method of Assessment

100% Coursework.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

You examine the social psychological processes involved in defining an act as criminal and deserving of prosecution and conviction. You evaluate why we punish offenders; how they are caught, identified and prosecuted; the role of public opinion in justice and the court process. We also evaluate legal decisions by jurors and judges; the treatment of offenders with special needs and the effects of imprisonment for both prisoners and the prison system.

** CURRENTLY NOT RUNNING **

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. 8.1. Critically apply an understanding of the role of ethics in the study of psychology as a discipline.
- 8.2. 8.2. Demonstrate a systemic and advanced understanding of the design of psychology experiments.
- 8.3. variety of quantitative and qualitative research areas of social, forensic, cognitive and developmental psychology.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. 9.1. Demonstrate the ability to solve complex, advanced research problems in the field of Psychology.
- 9.2. 9.2. Apply intellectual skills taught in the module, such as critical reflection.
- 9.3. 9.3. Apply transferable skills relating to programming.

Method of Assessment

100% coursework. This is formed of a critique of an example ethics application (50%) and an In Class Test (50%)

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

This module will provide you with a broad and practical understanding of the processes involved in the development of high-quality and ethical research designs and procedures in Psychology. It will give you an understanding of a range of practical tools used to present stimuli and questionnaires in psychological studies. You will also be able to determine the feasibility of conducting a particular study in Psychology in relation to sample size.

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1. research review and project report.

8.2. forensic settings as evidenced in a complete project report.

8.3. Forensic Psychology by means of a complete project report.

8.4. either producing and receiving ethical approval for a piece of research, or, in the case of existing data, showing appreciation of core ethical issues in the complete project report.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1. report.

9.2. 9.2. Write up a piece of research for publication as documented in a complete critical research review, and project report.

9.3. 9.3. Apply statistical procedures to real world research issues as documented in the complete project report.

Method of Assessment

100% Coursework, formed of one review article (40%) and one empirical paper (60%).

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Restrictions

Available only to Forensic Psychology MSc-T students.

Synopsis *

This module entails the student undertaking independent empirical research on a forensic topic. The area is guided by the students' supervisor, but also informed by the Division of Forensic Psychology curriculum. The research is to be at a publishable level and should make an original contribution to the field, however it is not required to provide as comprehensive coverage or investigation as that which would be required for a PhD.

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1 Demonstrate advanced knowledge of the core domains of intergroup relation
- 8.2 Develop the intellectual skill of critical reflection when considering the diversity of theoretical and empirical perspectives that underpin the study of intergroup relations
- 8.3 Show key intellectual skills when critically evaluating theoretical and empirical literature on intergroup relations
- 8.4 Develop the skill to apply the theoretical models to real-life social contexts
- 8.5 Develop the transferable skills to communicate and evaluate analyses of intergroup relations in speech and writing

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1 Demonstrate writing, reading and oral skills to present and interpret material with evidence of the use of relevant literature
- 9.2 Develop knowledge and understanding of intergroup relations
- 9.3 Show the ability to critically evaluate the quality of theory and method in published research and of peers
- 9.4 Demonstrate the ability to express opinions, argue rationally and engage in critical thinking both orally and in the written form

Method of Assessment

100% Coursework.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

This module provides an opportunity to study at an advanced level the literature on intergroup relations. The module builds upon knowledge gathered in the undergraduate degree on social and personality psychology. It will stress how social-psychological and personality theories in combination can explain intergroup processes. Emphasis will be placed on applying theoretical models and empirical findings to the analysis of real-world problems. Topics that will be addressed include social identity and social categorization, social inequality, prejudice, intergroup conflict and interventions to improve intergroup relations. The module relies primarily on research in social and personality psychology, but we will also consider perspectives from other fields, such as political science and sociology. This module relies heavily on student presentation, participation and student discussion.

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1. forensic, organisational, political and gerontological settings.

8.2. the development, testing and refinement of theory to evidence-based professional practice.

8.3. change can be achieved.

8.4. 8.4. Demonstrate expertise in the design and implementation of different research and evaluation methodologies.

8.5. 8.5. Demonstrate an appreciation of issues involved in applying social psychological theory and methods

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1. 9.1. Critically reflect on key themes with oral discussion and written analysis.

9.2. 9.2. Creatively evaluate and generalise appropriately.

9.3. 9.3. Select and synthesise complex materials, through organising, developing, and evaluating evidence.

9.4. technology.

9.5. 9.5. Plan work and study independently, through personal development and time management.

9.6. 9.6. Communicate persuasively, through written assessment and oral discussions.

9.7. 9.7. Cooperate within a team, and recognise the contribution of self and others.

9.8. 9.8. Understand the statistical analysis conducted by others, and its limits.

Method of Assessment

100% Coursework.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

This module provides an understanding of current conceptual debates in Social Psychology together with an appreciation of how practitioners apply behavioural principles in their field of work. The module focuses on the application of conceptual and methodological insights to significant real-world problems, as well as the development of new theoretical approaches based on the lessons learned from applied research and practice.

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. systems.
- 8.2. treatment of offenders.
- 8.3. treatment of offenders, ethical issues, and the production of testimony.
- 8.4. offenders.
- 8.5. disordered offenders.
- 8.6. disordered offenders.
- 8.7. and non-disordered dangerous offenders.
- 8.8. assessment and treatment of offenders.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. manner
- 9.2. to forensic practice and other professional settings
- 9.3. synthesising complex material in psychology
- 9.4. 9.4. Describe and critically evaluate the literature in assessment and treatment of offenders

Method of Assessment

100% Coursework. Formed of a reflective piece (30%) and an assessment report (70%)

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Restrictions

Available only to Forensic MSc-T students.

Synopsis *

In this module you are introduced to the role of forensic psychology within secure establishments, exploring both general and specific issues related to working with dangerous mentally disordered and non-disordered offenders. You evaluate the importance of assessment in understanding the function of offending, identifying treatment targets and measuring change, and explore the difficulties associated with such assessments. Treatment models and their application to a variety of offences are discussed, including in special hospital and criminal justice settings. Gender differences are raised with particular attention to mental health problems in women who offend. Forensic cases are used to demonstrate the complexities associated with assessing and treating this population.

Contact Hours

Total contact hours: 22

Private study hours: 178

Total study hours: 200

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1 Understand the core areas of concern in cognitive psychology and neuropsychology (such as vision, memory and language)

8.2 Understand the practice and significance of interdisciplinary cooperation, and the role of cross-domain constraint satisfaction in furthering scientific discovery in the different areas of cognitive psychology and neuropsychology.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1 Acquiring the critical and analytical skills in dealing with one's own and others' theoretical ideas and empirical research (from a range of disciplines).

9.2 The ability to develop coherent arguments and to evaluate critically and reconstruct flexibly in the light of one's own and others' feedback.

9.3 Developing the ability to communicate criticism, analyses, and arguments effectively and efficiently.

9.4 Extending their ability to communicate effectively and efficiently through different means (e.g. in written extended essays and orally)

Method of Assessment

100% Coursework.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

The course provides a coherent base for understanding the methodological and theoretical issues that are currently considered important in the study of cognitive psychology and neuropsychology. Students will be shown how to critically appraise the philosophical and theoretical underpinnings of the various disciplines that comprise cognitive psychology and neuropsychology, and to evaluate how these disciplines may successfully be combined to further scientific understanding of the core problems in cognitive psychology and neuropsychology today. A selection of material from areas such as vision, learning, memory, language, reasoning, emotion will be referred to in order to examine the relationship between brain and mind, the modularity of brain and mind, and the notion of different levels/frameworks of description and explanation.

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1 Demonstrate knowledge and understanding of how core concepts, theories and findings in the study of research in cognition have been applied to broader contexts.
- 8.2 Critically reflect when considering the diversity of perspectives in the study of cognition in its broader context.
- 8.3 Critically evaluate theoretical and empirical literature on cognition and action.
- 8.4 Show an ability to evaluate and interpret the application of Cognitive theory and empirical findings to its broader context
- 8.5 Demonstrate appreciation of the historical and conceptual issues in the study of Cognition in Action

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1 Demonstrate knowledge of a range of theoretical approaches to cognitive psychology/neuropsychology
- 9.2 Demonstrate awareness of current research and scholarship that requires students to engage with aspects of work at the frontiers of knowledge

Method of Assessment

100% Coursework

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

The central theme of this module will be to explore how cognition functions in the real world, that is, to investigate the application of cognitive models to the broader context of human behaviour. Possible topics for study include: the role of cognition in development, emotion, memory and action; applications to eyewitness testimony; intentional forgetting and embodied cognition. Practical applications and relevance to a general understanding of behaviour will be emphasised throughout.

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1 Demonstrate knowledge and understanding of current theories and research in developmental social psychology.

8.2 Demonstrate key intellectual skills by critically evaluating developmental social psychological theories and research, and presenting these arguments in written form.

8.3 Develop critical analysis skills through group discussion.

8.4 Develop knowledge and understanding of common research methods used by developmental psychologists, including the research questions they can be used to answer, as well as the advantages and disadvantages of each method.

8.5 Gain insight into the key challenges facing developmental psychologists conducting research.

8.6 Develop the ability to generate new research questions, and develop a plan of research to answer these questions in the form of a written 'Research Proposal'

The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1 Develop ability to appraise developmental social psychology theories and methods used in the study of social development.

9.2 Work and collaborate with others in reviewing research and communicate work to an audience (i.e. via group discussion).

9.3 Demonstrate the ability to solve problems through independent learning and develop own research ideas.

9.4 Develop ability to communicate in writing.

Method of Assessment

100% Coursework. Formed of an extended essay(80%) and a critical review (20%)

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

Developmental social psychology aims to understand the developmental path of the social psychological processes involved in human thought and action. The underlying premise of this expanding, yet relatively new, field is that an understanding of any social psychological phenomena is only possible once we explain when and how it develops. This area of study has grown from a recognition that social psychologists rarely include a developmental dimension to their explanations, while developmentalists often ignore the social basis of human development. SP842 Advanced Developmental Social Psychology aims to provide students with a strong understanding of the theoretical accounts of major issues within the field of developmental social psychology (e.g. the development of prejudice and social identity, the impact of gender and racial stereotyping, language development, peer influence). Students will also be exposed to a variety of research methods employed by developmental psychologists and will develop the ability to critically evaluate these methods.

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1 Demonstrate advanced knowledge of the core domains of group processes; particularly as they relate to teams and organisations

8.2 Understand a range of conceptual, historical, theoretical, and philosophical issues underlying the role of groups and teams in organisations

8.3 Demonstrate knowledge and understanding of evolutionary perspectives on human group behaviour;

8.4 Develop the intellectual skill of critical reflection when considering the diversity of perspectives, including psychological, management, and evolutionary perspectives, that underpin the study of groups, teams, and organisations

8.5 Show key intellectual skills when critically evaluating theoretical and empirical literature on group processes;

8.6 Design meaningful research studies and write a research proposal which link psychological science to organisational issues;

8.7 Apply psychological research about groups and teams in organisations to management and business contexts

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1 Creatively evaluate and generalise appropriately;

9.2 Select and synthesis complex materials through organising, developing, and evaluating relevance;

9.3 Systematically approach problem solving, individually and as part of a group, also using appropriate information technology;

9.4 Plan work and study independently, through personal development and time management;

9.5 Communicate persuasively, through written assessment and oral discussions;

9.6 Cooperate within a team, and recognise the contribution of self and others;

9.7 Understand the statistical analysis conducted by others, and its limits.

Method of Assessment

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

This module provides an opportunity to study at an advanced level the literature on group processes and intergroup relations as it relates to teams and organisations. The module introduces theoretical and empirical background, and uses these to help students develop ideas for further research and practice. All topics will be related to groups and teams within organisations, and will include: social identity processes in organisations, leadership, organisational mergers, and equality. We will also consider how social-psychological and evolutionary theories in combination can explain group processes within teams and organisations. The module will emphasis small group and team research in social and evolutionary psychology, as it applies to organisations. It will also consider perspectives from other fields, such as economics and anthropology. This module relies heavily on student presentation, participation and student discussion.

Synopsis *

This module asks what sort of thinking occurs in individuals who sexually molest children, rape adults, or commit acts of violence. Do they think their actions are legitimate in some instances or do they know they are wrong but choose to offend nonetheless? Cognition, or thinking, is recognised as being a key component underlying the way people behave. Understanding how research on cognition and social cognition can be applied to crime allows researchers and practitioners to shed light on offenders' antisocial behaviours. In this strongly research-based course, you learn about some of the influential theories that have been developed to help explain offenders' antisocial actions, the latest research designed to help understand why men offend, and widely used treatment programmes designed to alter cognitive characteristics associated with offending in order to reduce recidivism. In addition you learn about fascinating social-cognitive phenomena associated with child and adult eyewitness testimony, and how memory can play havoc with the criminal justice system.

23.1.18 Synopsis removed ref to lectures as per CMA guidelines TF

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1 Develop knowledge and understanding of structures and functions of the human brain and how they can be measured successfully using behavioural methods, eye-tracking and event-related brain potentials
- 8.2 Show key intellectual skills by critically evaluating the role of cognitive neuroscience techniques for examining explicit human behaviour and the underlying cognitive mechanisms
- 8.3 Develop a sound understanding of how results from the different cognitive neuroscience techniques relate to/ complement each other (including temporal sensitivity and spatial resolution)
- 8.4 Develop the ability to evaluate through written analysis and interpretation the contributions made by the different approaches and research methods that are used in cognitive neuroscience

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1 Familiar with a broad range of advanced research methods relevant to cognitive (neuro)psychology
- 9.2 Capable of independently planning a research study and familiar with the appropriate statistical techniques for analysing the results
- 9.3 Critique (i.e. evaluate the strengths and weaknesses of) the research methods and evaluate their relevance to specific research questions
- 9.4 Competently disseminate their work to an audience
- 9.5 Demonstrate the ability to express opinions, argue rationally and engage in critical thinking both orally and in the written form

Method of Assessment

100% Coursework. Formed of a poster presentation (20%) and essay (80%).

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

This module will provide students with theoretical instruction and practical experience in some key advanced research methods appropriate for scientific research in cognitive (neuro)psychology. The study of cognitive processes and the temporal nature of brain activity will feature highly in this module.

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1 Understand alternative theoretical, empirical, and methodological perspectives in the study of developmental psychology

8.2 Critically appraise research in cognitive development

8.3 Present and defend complex arguments and develop their own view on the most appropriate theoretical or methodological approach to each topic.

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1 Appraise developmental psychology theories and methods used in the study of cognitive development through an understanding of statistical material

9.2 Ability to communicate critically evaluations of developmental psychology methods and theories in terms of cognitive development.

9.3 Work and collaborate with others in reviewing research and disseminate or communicate work to an audience (i.e. via a poster, presentation)

9.4 Demonstrate the ability to solve problems through independent learning and use of IT.

Method of Assessment

100% Coursework. Formed of two seminar reports (10% each) and a research proposal (80%).

Preliminary Reading

This module covers a variety of materials, not available in a single textbook. The main teaching materials are journal articles, which will be made available throughout the module.

Pre-requisites

None

Synopsis *

This module explores the typical development of key cognitive functions and the psychological methods employed to study these developments. The aim of the module is to explore these topics at an advanced level, allowing students to evaluate critically pieces of research in terms of their findings, conceptual underpinnings, and/or methodological approaches.

Lecture topics may include: Research methods in developmental psychology; Critical periods and plasticity; Introduction to theories of word learning; The critical period for language learning; Social learning and imitation; Thinking about the minds of others; Understanding knowledge; Metacognition

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. Professional Settings e.g. education, healthcare, clinical.
- 8.2. Settings e.g. education, healthcare, clinical.
- 8.3. potentially provide insights/solutions.
- 8.4. 8.4. Familiarise self with Case Studies illustrating Developmental Psychology in action in Professional Settings.
- 8.5. 8.5. Develop own Case Study illustrating Developmental Psychology in action in Professional Settings.
- 8.6. Settings, in terms of the relevance and usefulness of theory and methodologies used in Developmental Psychology.
- 8.7. 8.7. Evaluate the contribution developmental psychology can make in Professional Settings.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. understanding of statistical material
- 9.2. development.
- 9.3. a poster, presentation)
- 9.4. 9.4. Demonstrate the ability to solve problems through independent learning and use of IT.

Method of Assessment

100% Coursework. Formed of a poster (40%) and an essay (60%).

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

The focus of this module is on developing your understanding of how developmental psychology can be applied in professional settings, e.g. education, healthcare and clinical psychology. You receive lectures from professionals working in clinical psychology, educational psychology and speech and language development, who can explain, first-hand, current issues in professional settings where developmental psychology could provide insights or solutions. The speakers outline major theories that inform practice and critically evaluate the role of developmental psychology in their professional setting with reference to case studies.

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1 Demonstrate knowledge and understanding of the issues surrounding human behaviour and performance when performing as eyewitnesses.
- 8.2 Show key intellectual skills by critically evaluating the role of psychological research for understanding human behaviour in relation to the criminal justice system.
- 8.3 Demonstrate a sound understanding of how psychological theory and methodology have influenced police procedures.
- 8.4 Evaluate through written analysis and interpretation the contributions made by psychological research to improving the way in which eyewitness evidence is collected and how eyewitness testimony is evaluated

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1 Show familiarity with how advanced research methods relevant to cognitive psychology can be applied to real world questions.
- 9.2 Critique (i.e. evaluate the strengths and weaknesses of) the research data intended to address specific research questions
- 9.3 Competently disseminate their work to an audience (i.e. via a poster)
- 9.4 Express opinions, argue rationally and engage in critical thinking both orally and in the written form

Method of Assessment

100 % Coursework, comprising presentations and a research proposal

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Synopsis *

This module will provide students with theoretical instruction about how the methods and techniques of cognitive psychology have been applied to the practical topic of evaluating eyewitness testimony. The study of cognitive processes involved in face recognition and face matching will feature highly in this module.

25.1.18 synopsis updated to match MO and MS tf

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1 Demonstrate knowledge and understanding of current theories and research in the study of developmental psychopathology.

8.2 Critically evaluate theories of and research into developmental psychopathology, and demonstrating these skills in written form.

8.3 Show critical analysis skills through group discussion.

8.4 Demonstrate knowledge and understanding of common research methods used to study developmental psychopathology, including the research questions they can be used to answer.

8.5 Gain insight into the key challenges facing clinicians and practitioners who work in educational and clinical settings with people who have developmental disorders.

8.6 Gain insight into the key techniques employed by clinicians and practitioners who work in educational and clinical settings with people who have developmental disorders

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1 Appraise theories and methods used in the study of developmental psychopathology.

9.2 Work and collaborate with others in reviewing research, and communicate work to an audience via group discussion.

9.3 Solve problems through independent learning and generate ideas about directions for future research.

9.4 Communicate orally and in writing.

Method of Assessment

60% Examination and 40% Coursework.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

This module investigates common forms of neurodevelopmental disorder. The goal of the module is to help students understand the behavioural manifestations of these disorders, as well as their possible psychological/cognitive, neurobiological, and/or etiological (genetic/environmental) causes. Moreover, the module will explore some characteristic approaches that clinicians take when attempting to support people with these disorders and remediate the difficulties that these people experience. Finally, students will learn to evaluate critically pieces of research on developmental psychopathology in terms of study findings, conceptual underpinnings, and/or methodological approaches

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. organisations
- 8.2. 8.2. Demonstrate specialist knowledge and systematic understanding of the key issues in organisational psychology.
- 8.3. psychological issues in organisations.
- 8.4. political, environmental, technical, legal, social).
- 8.5. 8.5. Develop specialist knowledge, and evaluate critically current research in organisational psychology
- 8.6. using APA format
- 8.7. 8.7. Conduct organisational psychology research to address business and management issues
- 8.8. 8.8. Apply ethical values to research and practice related to organisational psychology
- 8.9. 8.9. Understand how to apply psychological research to management and business contexts

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. 9.1. Critically reflect on key themes with oral discussion and written analysis
- 9.2. 9.2. Creatively evaluate and generalise appropriately
- 9.3. 9.3. Select and synthesise complex materials, through organising, developing, and evaluating relevance
- 9.4. technology
- 9.5. 9.5. Plan work and study independently, through personal development and time management
- 9.6. 9.6. Communicate persuasively, through written assessment and oral discussions
- 9.7. 9.7. Cooperate within a team, and recognise the contribution of self and others
- 9.8. 9.8. Conduct appropriate data analysis and to understand the statistical analysis conducted by others, and its limits

Method of Assessment

80% Dissertation

20% Coursework. Formed of a research seminar presentation (15%), abstracts from research seminar topics (5%)

Preliminary Reading

No books are recommended for purchase. You will conduct your own literature search and discuss suitable readings with your supervisor. The following materials are useful references and can be considered in preparation for the module:

American Psychological Association (2009). Publication Manual of the American Psychological Association (6th Ed.). Washington: American Psychological Association

British Psychological Society (2009). Code of Ethics and Conduct. Available:
http://www.bps.org.uk/system/files/documents/code_of_ethics_and_conduct.pdf

Brewerton, P., & Millward, L. (2001). Organizational Research Methods: A Guide for Students and Researchers. London, UK: Sage Publications Ltd.

Pre-requisites

SP857 Organisational Psychology: Methods and Statistics

Synopsis *

All students undertake a supervised empirical research project in an area of organisational psychology to gain practical experience of research. The module allows students to develop research skills by working closely with expert researchers or practitioners. The research will be conducted as a research apprenticeship, so the student will work on a wider programme or research developed by the supervisor, or on a project specific to an organisation (still with close supervision from an academic supervisor). Some of the apprenticeship will involve working in collaborative teams (e.g. for data collection) but all students will write up the research independently in the form of a dissertation. Most projects will be with academics from the University (School of Psychology, Kent Business School, or related disciplines) but there will be some opportunities for students to work on projects outside the University with external research partners

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. descriptive and qualitative research, and how these are applied in the organisational psychology context.
- 8.2. organisational psychology research methods.
- 8.3. and study design.
- 8.4. back to hypotheses and theories.
- 8.5. publishing (APA guidelines).

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. able to carry out an effective literature search using electronic sources such as Web of Knowledge and Google Scholar; accurately summarise the literature sources and critically evaluate their relevance.
- 9.2. relating to organising information clearly; presenting information orally and in written form; adapting communication style for different audiences; use of graphs and table as communication tools
- 9.3. 9.3. Analyse data and present research findings in an accessible manner.
- 9.4. analytical tools in the practice of organisational psychology within business contexts.
- 9.5. result.

Method of Assessment

100% Coursework. Formed of a computing test, a theory multiple choice test, and a research proposal.

Pre-requisites

None

Synopsis *

This module focuses on developing and extending your knowledge of research methods and statistics. An important element focuses on developing your understanding of the basics of research methods and statistical analysis. However, the module goes further by teaching you about some advanced methodological and statistical tools. Topics to be covered include:

- a) Searching and reviewing relevant literature for a research project.
- b) Research design, variables, sampling, levels of measurement, surveys and experiments.
- c) Descriptive statistics (frequency, mean, mode, median).
- d) Basic inferential statistics (t-test, correlations, chi-square, One-Way ANOVA).
- e) Advanced inferential statistics (Multivariate ANOVA, Linear & Logistic Regression)
- f) Qualitative research methods (focus groups, interviews)
- g) Presenting statistical findings in an understandable way when writing research reports.

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. and demonstrate understanding through critical evaluation.
- 8.2. and economic environment in entrepreneurship and innovation, drawing upon established and new theories in the field.
- 8.3. business model design, and its application.
- 8.4. customers.
- 8.5. 8.5. Demonstrate how to choose the right metrics to track the potential success of a business idea.
- 8.6. 8.6. Present and pitch validated business or research ideas to investors, managers, and/or funders

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. 9.1. Critically reflect on key themes with oral discussion and written analysis
- 9.2. 9.2. Creatively evaluate and generalise appropriately
- 9.3. 9.3. Select and synthesise complex materials, through organising, developing, and evaluating relevance
- 9.4. technology
- 9.5. 9.5. Plan work and study independently, through personal development and time management

- 9.8. 9.8. Understand the statistical analysis conducted by others, and its limits

Method of Assessment

100% Coursework. Formed of a class presentation (20%) and a business report (80%).

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

This module focuses on helping students develop the skills of working in an innovative environment as a social scientist. Innovation has become important to organisations. The practice of hypothesis-driven or Lean Innovation provides a unique role for the social scientist within start-ups and large organisations. During this module, you learn about the theory and practice of innovation and work with a team on validating a product idea.

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1 Demonstrate a sound knowledge covering a range of conceptual and theoretical issues underlying a specific area within organisational psychology
- 8.2 Demonstrate specialist knowledge and systematic understanding of a key chosen area in organisational psychology
- 8.3 Demonstrate a clear understanding of the major research and analytic techniques adopted by organisational psychologists (research/practice) in the specific chosen area of organisational psychology
- 8.4 Demonstrate an understanding of the application of psychology in organisations
- 8.5 Demonstrate an understanding the major analytic techniques and methods adopted by researchers in the chosen area of organisational psychology, including an awareness of ethical issues and how these can be applied.
- 8.6 Demonstrate an ability to independently research existing materials and data to develop a literature review of a specific chosen area in organisational psychology,

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. 9.1. Critically reflect on key themes through oral discussion and written analysis
- 9.2. 9.2. Demonstrate critical thinking and creativity, to evaluate and generalise materials appropriately
- 9.3. 9.3. Select and synthesise complex materials through organising, developing, and evaluating relevance
- 9.4. 9.4. Demonstrate a systematic approach to problem solving, individually and in groups
- 9.5. 9.5. Plan work and study independently, and use resources in a way suited to further study or practice
- 9.6. 9.6. Find, record, organise, and contribute to knowledge in the field of organisational psychology
- 9.7. 9.7. Write clearly, concisely, and in an organised way
- 9.8. 9.8. Enhance personal development skills through time management, autonomy, self-drive and self management
- 9.9. novelties, and potential applications

Method of Assessment

100% Coursework. Formed of an outline proposal (20%) and an extended Literature Review (80%).

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis

In this module you conduct an extended literature review and critique on a topic relevant to organisational psychology. Through discussion with an academic supervisor you identify a particular area of research that is relevant and topical. You then conduct an extended literature review and critique, gaining advanced research and problem solving skills. On successful completion of the module you will have gained specialist knowledge and evidence of independent research.

SP860		Political Psychology				
Version	Campus	Term(s)	Level	Credit (ECTS)	Assessment	Convenor
1	Canterbury	Autumn	M	20 (10)	100% Coursework	Cichocka Dr A

Availability

Available to students registered for the MSc in Political Psychology, the MSc in Research Methods in Psychology, or the MSc in Social and Applied Psychology.

Contact Hours

34 hours

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1 Demonstrate advanced knowledge of the core domains of political psychology, including core conceptual, historical, theoretical, and philosophical issues underlying the discipline of political psychology;
- 8.2 Demonstrate the intellectual skill of critical reflection when considering the diversity of theoretical and empirical perspectives that underpin the study of psychology of political processes;
- 8.3 Demonstrate the skill to synthesise literature and research in psychology and political science;
- 8.4 Show key intellectual skills when critically evaluating theoretical and empirical literature on political psychology;
- 8.5 Demonstrate the skill to apply the theoretical models to real-life social contexts;
- 8.6 Demonstrate the transferable skills to communicate and evaluate analyses of political psychology in speech and writing;

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1 Demonstrate writing, reading and oral skills to present and interpret material with evidence of the use of relevant literature;
- 9.2 Show the ability to critically evaluate the quality of theory and method in published research and of peers;
- 9.3 Demonstrate the ability to express opinions, argue rationally and engage in critical thinking both orally and in the written form;

Method of Assessment

100% Coursework.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None.

Synopsis *

This module provides an opportunity to study the literature on political psychology at an advanced level. It stresses how psychology and political science, in combination, can serve to analyse and explain political processes. Emphasis is on applying theoretical models and empirical findings to analysing real-world problems. Topics include political ideology, social justice and inequality, political engagement and extremism, political leadership and perceptions of government and authority. The module relies heavily on student participation and discussion.

Approx 50 hours

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1 Demonstrate the ability to report a piece of research according to professional conventions, including theory, hypotheses, methods, analysis and interpretation of results, and discussion.
- 8.2 Have a detailed appreciation of the difficulties and constraints they have encountered during their project.
- 8.3 Demonstrate that they have conducted an empirical research project in an area of Psychology or Political Science and informed by the other discipline, appropriate to their degree, documented in a complete project report.
- 8.4 Demonstrate the ability to present their scientific work in person, clearly and effectively, with the use of visual aids such as slides or posters.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1 Develop enhanced skills in critical evaluation of arguments
- 9.2 Developed enhanced skills in statistical analysis
- 9.3 Develop enhanced skills in the management of projects
- 9.4 Develop enhanced skills in written and oral communication – in particular the ability to communicate complex information in a clear and accessible style.

Method of Assessment

90% Dissertation.

10% Coursework. Formed of a presentation.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Synopsis *

The module will stress the integration of psychology and political science as a way to analyse and explain political processes. All students undertake a supervised empirical research project grounded in the area of psychology or political science and informed by the other discipline. The aim of the dissertation is to teach students the ability to plan, execute, analyse, and report a piece of independent research in the relevant setting. The dissertation will consolidate theoretical knowledge of psychology and political science, to foster an ability to integrate findings from the two fields, an appreciation of the ways in which that knowledge has been applied in previous research and practice, and the methodological and statistical skills to set up a scientific investigation.

Timetable: A research proposal is written and approved in the Autumn Term. All research with human subjects will require approval of the School of Psychology Ethics Panel. If appropriate, an ethical application is submitted to the panel (and, if required, outside ethics committees).

2020-21 Postgraduate Module Handbook

SP862 Forensic Psychology Reflective Log Book						
Version	Campus	Term(s)	Level	Credit (ECTS)	Assessment	Convenor
1	Canterbury	Whole Year	M	4 (2)	Pass/Fail Only	Gannon Prof T

Availability

Only available to students studying Forensic Psychology MSc-T. Not available wild. Not available to short-term credit students.

Contact Hours

Total contact hours: 1
Private study hours: 39
Total study hours: 40

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. 8.1. Adopt multiple, comprehensive theoretical perspectives on reflective issues concerning Forensic Psychology
- 8.2. 8.2. Demonstrate a complex and systemic understanding of reflection applied to Forensic Psychology
- 8.3. experiences involving reflection in Forensic Psychology.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. 9.1. Engage in reflective practice on professional development and career trajectory
- 9.2. 9.2. Be sensitive to contextual and interpersonal factors
- 9.3. experiences and activities

Method of Assessment

Logbook (Pass/Fail)

Preliminary Reading

No core texts are required. However, cutting edge journal articles will be made available for discussion as part of the module. These will be subject to change each year.

Synopsis *

You will be required to maintain a reflective Log Book of all work and visits undertaken as part of your programme of study. This provides you with a record of activities for your CV, contributes to employability, and will aid further study at PhD level if you wish.

2020-21 Postgraduate Module Handbook

SP864 Current Issues in Cognitive Psychology and Neuropsychology						
Version	Campus	Term(s)	Level	Credit (ECTS)	Assessment	Convenor
1	Canterbury	Autumn	M	20 (10)	100% Coursework	Azevedo Dr R
1	Canterbury	Spring	M	20 (10)	100% Coursework	

Availability

This module is compulsory to students registered for the MSc in Cognitive Psychology/Neuropsychology.

Contact Hours

22 hours

Learning Outcomes

8. The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

8.1 Understand the core areas of concern in cognitive psychology and neuropsychology (such as vision, memory and language)

8.2 Understand the practice and significance of interdisciplinary cooperation, and the role of cross-domain constraint satisfaction in furthering scientific discovery in the different areas of cognitive psychology and neuropsychology.

9. The intended generic learning outcomes.

On successfully completing the module students will be able to:

9.1 Acquiring the critical and analytical skills in dealing with one's own and others' theoretical ideas and empirical research (from a range of disciplines).

9.2 The ability to develop coherent arguments and to evaluate critically and reconstruct flexibly in the light of one's own and others' feedback.

9.3 Developing the ability to communicate criticism, analyses, and arguments effectively and efficiently.

9.4 Extending their ability to communicate effectively and efficiently through different means (e.g. in written extended essays and orally)

Method of Assessment

100% Coursework

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Synopsis *

The course provides a coherent base for understanding the methodological and theoretical issues that are currently considered important in the study of cognitive psychology and neuropsychology. You are shown how to critically appraise the philosophical and theoretical underpinnings of the various disciplines that comprise cognitive psychology and neuropsychology. You evaluate how these disciplines may be combined to further scientific understanding of the core problems in cognitive psychology and neuropsychology today. Material from areas such as vision, learning, memory, language, reasoning and emotion will be referred to in order to examine the relationship between brain and mind, the modularity of brain and mind, and the notion of different levels/frameworks of description and explanation.

SP998 Advanced Research Project in Psychology						
Version	Campus	Term(s)	Level	Credit (ECTS)	Assessment	Convenor
4	Canterbury	Whole Year	M	60 (30)	90% Project, 10% Coursework	Burgmer Dr P

Availability

Available to students registered for the MSc in Cognitive Psychology/Neuropsychology, the MSc in Developmental Psychology, the MSc in Group Processes and Intergroup Relations, the MSc in Research Methods in Psychology, or the MSc in Social and Applied Psychology.

Contact Hours

Total contact hours: No formal timetabled events.

Private study hours: 600

Total study hours: 600

Learning Outcomes

The intended subject specific learning outcomes.

On successfully completing the module students will be able to:

- 8.1. analysis and interpretation of results, and discussion.
- 8.2. 8.2. Have a detailed appreciation of the difficulties and constraints they have encountered during their project.
- 8.3. degree, documented in a complete project report.
- 8.4. as slides or posters.

The intended generic learning outcomes.

On successfully completing the module students will be able to:

- 9.1. 9.1. Demonstrate enhanced skills in critical evaluation of arguments
- 9.2. 9.2. Demonstrate enhanced skills in statistical analysis
- 9.3. 9.3. Demonstrate enhanced skills in the management of projects
- 9.4. – in particular the ability to communicate complex information in a clear and accessible style.

Method of Assessment

90% Dissertation

10% Coursework. Formed of an oral presentation.

Preliminary Reading

The module reading list can be found online at <http://resourcelists.kent.ac.uk/index.html>

Pre-requisites

None

Synopsis *

All students undertake a supervised empirical research project in an area of psychology relevant to their chosen MSc programme, and submit it as a typed dissertation of approximately 8,000 words. The aim of the dissertation is to test the student's ability to plan, execute, analyse, and report a piece of independent research in the relevant setting. The dissertation requires detailed theoretical knowledge of the discipline, an appreciation of the ways in which that knowledge has been applied in previous research and practice, and the methodological and statistical skills to set up a scientific investigation. Supervision is provided by the principal teaching staff and by other appropriate staff with research interests in a student's chosen area. Students are advised to read the School's Ethics pages for information on submitting applications for ethical approval to the School and to relevant outside bodies.
