TRAVELS INTO SEVERAL REMOTE NATIONS OF THE WORLD. IN FOUR PARTS. BY LEMUEL GULLIVER.

A Letter from Capt. Gulliver to his Cousin Simpson	37
The Publisher to the Reader	43
The Contents	45
Part I: A Voyage to Lilliput	51
Part II: A Voyage to Brobdingnag	119
Part III: A Voyage to Laputa, Balnibarbi, Glubbdubdrib, Luggnagg and Japan	193
Part IV: A Voyage to the Country of the Houyhnhnms	265
Notes	347

Plate I Part I Page 1.

CHAPTER I

The author giveth some account of himself and family, his first inducements to travel. He is shipwrecked, and swims for his life, gets safe on shore in the country of Lilliput, is made a prisoner, and carried up the country.

My father had a small estate in Nottinghamshire; I was the third of five sons. He sent me to Emanuel College in Cambridge, at fourteen years old,¹ where I resided three years, and applied myself close to my studies: but the charge of maintaining me (although I had a very scanty allowance) being too great for a narrow fortune, I was bound apprentice to Mr James Bates, an eminent surgeon in London, with whom I continued four years; and my father now and then sending me small sums of money, I laid them out in learning navigation, and other parts of the mathematics, useful to those who intend to travel, as I always believed it would be some time or other my fortune to do. When I left Mr Bates, I went down to my father; where, by the assistance of him and my uncle John, and some other relations, I got forty pounds, and a promise of thirty pounds a year to maintain me at Leyden:² there I studied physic³ two years and seven months, knowing it would be useful in long voyages.

Soon after my return from Leyden, I was recommended by my good master Mr Bates, to be surgeon to the *Swallow*, Captain Abraham Pannell commander; with whom I continued three years and a half, making a voyage or two into the Levant, and some other parts. When I came back, I resolved to settle in London, to which Mr Bates, my master, encouraged me, and by him I was recommended to several patients. I took part of a small house in the Old Jury;⁴ and being advised to alter my condition, I married Mrs Mary Burton,⁵ second daughter to Mr Edmond Burton hosier in Newgate Street, with whom I received four hundred pounds for a portion.

But, my good master Bates dying in two years after, and I having few friends, my business began to fail; for my conscience would not suffer me to imitate the bad practice of too many among my brethren. Having therefore consulted with my wife, and some of my acquaintance, I determined to go again to sea. I was surgeon successively in two ships, and made several voyages, for six years, to the East and West Indies, by which I got some addition to my fortune. My hours of leisure I spent in reading the best authors ancient and modern, being always provided with a good number of books; and when I was ashore, in observing the manners and dispositions of the people, as well as learning their language, wherein I had a great facility by the strength of my memory.

The last of these voyages not proving very fortunate, I grew weary of the sea, and intended to stay at home with my wife and family. I removed from the Old Jury to Fetter Lane, and from thence to Wapping, hoping to get business among the sailors; but it would not turn to account. After three years' expectation that things would mend, I accepted an advantageous offer from Captain William Prichard, master of the *Antelope*, who was making a voyage to the South Sea. We set sail from Bristol, May 4th, 1699, and our voyage at first was very prosperous.

It would not be proper, for some reasons, to trouble the reader with the particulars of our adventures in those seas: let it suffice to inform him, that in our passage from thence to the East Indies, we were driven by a violent storm to the north-west of Van Diemen's Land.⁶ By an observation, we found ourselves in the latitude of 30 degrees 2 minutes south. Twelve of our crew were dead by immoderate labour, and ill food, the rest were in a very weak condition. On the fifth of November, which was the beginning of summer in those parts, the weather being very hazy, the seamen spied a rock, within half a cable's length of the ship; but the wind was so strong, that we were driven directly upon it, and immediately

split. Six of the crew, of whom I was one, having let down the boat into the sea, made a shift to get clear of the ship, and the rock. We rowed by my computation about three leagues, till we were able to work no longer, being already spent with labour while we were in the ship. We therefore trusted ourselves to the mercy of the waves, and in about half an hour the boat was overset by a sudden flurry from the north. What became of my companions in the boat, as well as of those who escaped on the rock, or were left in the vessel, I cannot tell; but conclude they were all lost. For my own part, I swam as Fortune directed me, and was pushed forward by wind and tide. I often let my legs drop, and could feel no bottom: but when I was almost gone, and able to struggle no longer, I found myself within my depth; and by this time the storm was much abated. The declivity was so small, that I walked near a mile before I got to the shore, which I conjectured was about eight o'clock in the evening. I then advanced forward near half a mile, but could not discover any sign of houses or inhabitants; at least I was in so weak a condition, that I did not observe them. I was extremely tired, and with that, and the heat of the weather, and about half a pint of brandy that I drank as I left the ship, I found myself much inclined to sleep. I lay down on the grass, which was very short and soft, where I slept sounder than ever I remember to have done in my life, and as I reckoned, above nine hours; for when I awaked, it was just daylight. I attempted to rise, but was not able to stir: for as I happened to lie on my back, I found my arms and legs were strongly fastened on each side to the ground; and my hair, which was long and thick, tied down in the same manner. I likewise felt several slender ligatures across my body, from my armpits to my thighs. I could only look upwards, the sun began to grow hot, and the light offended mine eyes. I heard a confused noise about me, but in the posture I lay, could see nothing except the sky. In a little time I felt something alive moving on my left leg, which advancing

gently forward over my breast, came almost up to my chin; when bending mine eyes downwards as much as I could, I perceived it to be a human creature not six inches high,⁷ with a bow and arrow in his hands, and a quiver at his back. In the meantime, I felt at least forty more of the same kind (as I conjectured) following the first. I was in the utmost astonishment, and roared so loud, that they all ran back in a fright; and some of them, as I was afterwards told, were hurt with the falls they got by leaping from my sides upon the ground. However, they soon returned, and one of them, who ventured so far as to get a full sight of my face, lifting up his hands and eyes by way of admiration,⁸ cried out in a shrill, but distinct voice, *Hekinab degul*:⁹ the others repeated the same words several times, but I then knew not what they meant. I lay all this while, as the reader may believe, in great uneasiness: at length, struggling to get loose, I had the fortune to break the strings, and wrench out the pegs that fastened my left arm to the ground; for, by lifting it up to my face, I discovered the methods they had taken to bind me; and, at the same time, with a violent pull, which gave me excessive pain, I a little loosened the strings that tied down my hair on the left side, so that I was just able to turn my head about two inches. But the creatures ran off a second time, before I could seize them; whereupon there was a great shout in a very shrill accent, and after it ceased, I heard one of them cry aloud, *Tolgo phonac*; when in an instant I felt above an hundred arrows discharged on my left hand, which pricked me like so many needles; and besides, they shot another flight into the air, as we do bombs in Europe, whereof many, I suppose, fell on my body (though I felt them not), and some on my face, which I immediately covered with my left hand. When this shower of arrows was over, I fell a groaning with grief and pain, and then striving again to get loose, they discharged another volley larger than the first, and some of them attempted with spears to stick me in the sides; but, by good luck, I had on me a buff jerkin,

which they could not pierce. I thought it the most prudent method to lie still, and my design was to continue so till night, when, my left hand being already loose, I could easily free myself: and as for the inhabitants, I had reason to believe I might be a match for the greatest armies they could bring against me, if they were all of the same size with him that I saw. But Fortune disposed otherwise of me. When the people observed I was quiet, they discharged no more arrows: but, by the noise increasing, I knew their numbers were greater; and about four yards from me, over-against my right ear, I heard a knocking for above an hour, like people at work; when, turning my head that way, as well as the pegs and strings would permit me, I saw a stage erected about a foot and a half from the ground, capable of holding four of the inhabitants, with two or three ladders to mount it: from whence one of them, who seemed to be a person of quality, made me a long speech, whereof I understood not one syllable. But I should have mentioned, that before the principal person began his oration, he cried out three times *Langro debul san* (these words and the former were afterwards repeated and explained to me): whereupon immediately about fifty of the inhabitants came, and cut the strings that fastened the left side of my head, which gave me the liberty of turning it to the right, and of observing the person and gesture of him who was to speak. He appeared to be of a middle age, and taller than any of the other three who attended him, whereof one was a page who held up his train, and seemed to be somewhat longer than my middle finger; the other two stood one on each side to support him. He acted every part of an orator, and I could observe many periods of threatenings, and others of promises, pity and kindness. I answered in a few words, but in the most submissive manner, lifting up my left hand and both mine eyes to the sun, as calling him for a witness; and being almost famished with hunger, having not eaten a morsel for some hours before I left the ship, I found the demands of nature so

gently forward over my breast, came almost up to my chin; when bending mine eyes downwards as much as I could, I perceived it to be a human creature not six inches high,⁷ with a bow and arrow in his hands, and a quiver at his back. In the meantime, I felt at least forty more of the same kind (as I conjectured) following the first. I was in the utmost astonishment, and roared so loud, that they all ran back in a fright; and some of them, as I was afterwards told, were hurt with the falls they got by leaping from my sides upon the ground. However, they soon returned, and one of them, who ventured so far as to get a full sight of my face, lifting up his hands and eyes by way of admiration,⁸ cried out in a shrill, but distinct voice, *Hekinab degul*:⁹ the others repeated the same words several times, but I then knew not what they meant. I lay all this while, as the reader may believe, in great uneasiness: at length, struggling to get loose, I had the fortune to break the strings, and wrench out the pegs that fastened my left arm to the ground; for, by lifting it up to my face, I discovered the methods they had taken to bind me; and, at the same time, with a violent pull, which gave me excessive pain, I a little loosened the strings that tied down my hair on the left side, so that I was just able to turn my head about two inches. But the creatures ran off a second time, before I could seize them; whereupon there was a great shout in a very shrill accent, and after it ceased, I heard one of them cry aloud, *Tolgo phonac*; when in an instant I felt above an hundred arrows discharged on my left hand, which pricked me like so many needles; and besides, they shot another flight into the air, as we do bombs in Europe, whereof many, I suppose, fell on my body (though I felt them not), and some on my face, which I immediately covered with my left hand. When this shower of arrows was over, I fell a groaning with grief and pain, and then striving again to get loose, they discharged another volley larger than the first, and some of them attempted with spears to stick me in the sides; but, by good luck, I had on me a buff jerkin,

which they could not pierce. I thought it the most prudent method to lie still, and my design was to continue so till night, when, my left hand being already loose, I could easily free myself: and as for the inhabitants, I had reason to believe I might be a match for the greatest armies they could bring against me, if they were all of the same size with him that I saw. But Fortune disposed otherwise of me. When the people observed I was quiet, they discharged no more arrows: but, by the noise increasing, I knew their numbers were greater; and about four yards from me, over-against my right ear, I heard a knocking for above an hour, like people at work; when, turning my head that way, as well as the pegs and strings would permit me, I saw a stage erected about a foot and a half from the ground, capable of holding four of the inhabitants, with two or three ladders to mount it: from whence one of them, who seemed to be a person of quality, made me a long speech, whereof I understood not one syllable. But I should have mentioned, that before the principal person began his oration, he cried out three times *Langro debul san* (these words and the former were afterwards repeated and explained to me): whereupon immediately about fifty of the inhabitants came, and cut the strings that fastened the left side of my head, which gave me the liberty of turning it to the right, and of observing the person and gesture of him who was to speak. He appeared to be of a middle age, and taller than any of the other three who attended him, whereof one was a page who held up his train, and seemed to be somewhat longer than my middle finger; the other two stood one on each side to support him. He acted every part of an orator, and I could observe many periods of threatenings, and others of promises, pity and kindness. I answered in a few words, but in the most submissive manner, lifting up my left hand and both mine eyes to the sun, as calling him for a witness; and being almost famished with hunger, having not eaten a morsel for some hours before I left the ship, I found the demands of nature so

strong upon me, that I could not forbear showing my impatience (perhaps against the strict rules of decency) by putting my finger frequently on my mouth, to signify that I wanted food. The *Hurgo* (for so they call a great lord, as I afterwards learnt) understood me very well. He descended from the stage, and commanded that several ladders should be applied to my sides, on which above an hundred of the inhabitants mounted, and walked towards my mouth, laden with baskets full of meat, which had been provided and sent thither by the King's orders upon the first intelligence he received of me. I observed there was the flesh of several animals, but could not distinguish them by the taste. There were shoulders, legs and loins, shaped like those of mutton, and very well dressed, but smaller than the wings of a lark. I ate them by two or three at a mouthful, and took three loaves at a time, about the bigness of musket bullets. They supplied me as fast as they could, showing a thousand marks of wonder and astonishment at my bulk and appetite. I then made another sign that I wanted drink. They found by my eating that a small quantity would not suffice me; and being a most ingenious people, they slung up with great dexterity one of their largest hogsheads, then rolled it towards my hand, and beat out the top; I drank it off at a draught, which I might well do, for it hardly held half a pint, and tasted like a small wine of Burgundy, but much more delicious. They brought me a second hogshead, which I drank in the same manner, and made signs for more, but they had none to give me. When I had performed these wonders, they shouted for joy, and danced upon my breast, repeating several times as they did at first, *Hekinab degul*. They made me a sign that I should throw down the two hogsheads, but first warned the people below to stand out of the way, crying aloud, *Borach mivola*, and when they saw the vessels in the air, there was an universal shout of *Hekinab degul*. I confess I was often tempted, while they were passing backwards and forwards on my body, to seize forty or fifty of

the first that came in my reach, and dash them against the ground. But the remembrance of what I had felt, which probably might not be the worst they could do, and the promise of honour I made them, for so I interpreted my submissive behaviour, soon drove out those imaginations.¹⁰ Besides, I now considered myself as bound by the laws of hospitality to a people who had treated me with so much expense and magnificence. However, in my thoughts I could not sufficiently wonder at the intrepidity of these diminutive mortals, who durst venture to mount and walk on my body, while one of my hands was at liberty, without trembling at the very sight of so prodigious a creature as I must appear to them. After some time, when they observed that I made no more demands for meat, there appeared before me a person of high rank from his Imperial Majesty. His Excellency having mounted on the small of my right leg, advanced forwards up to my face, with about a dozen of his retinue. And producing his credentials under the Signet Royal, which he applied close to mine eyes, spoke about ten minutes, without any signs of anger, but with a kind of determinate resolution; often pointing forwards, which, as I afterwards found, was towards the capital city, about half a mile distant, whither it was agreed by his Majesty in council that I must be conveyed. I answered in few words, but to no purpose, and made a sign with my hand that was loose, putting it to the other (but over his Excellency's head, for fear of hurting him or his train) and then to my own head and body, to signify that I desired my liberty. It appeared that he understood me well enough, for he shook his head by way of disapprobation, and held his hand in a posture to show that I must be carried as a prisoner. However, he made other signs to let me understand that I should have meat and drink enough, and very good treatment. Whereupon I once more thought of attempting to break my bonds, but again, when I felt the smart of their arrows upon my face and hands, which were all in blisters, and many of the

darts still sticking in them, and observing likewise that the number of my enemies increased, I gave tokens to let them know that they might do with me what they pleased. Upon this, the *Hurgo* and his train withdrew with much civility and cheerful countenances. Soon after I heard a general shout, with frequent repetitions of the words, *Peplom selan*, and I felt great numbers of the people on my left side relaxing the cords to such a degree, that I was able to turn upon my right, and to ease myself with making water; which I very plentifully did, to the great astonishment of the people, who conjecturing by my motions what I was going to do, immediately opened to the right and left on that side, to avoid the torrent which fell with such noise and violence from me. But before this, they had daubed my face and both my hands with a sort of ointment very pleasant to the smell, which in a few minutes removed all the smart of their arrows. These circumstances, added to the refreshment I had received by their victuals and drink, which were very nourishing, disposed me to sleep. I slept about eight hours, as I was afterwards assured; and it was no wonder, for the physicians, by the Emperor's order, had mingled a sleepy potion in the hogsheads of wine.

It seems that upon the first moment I was discovered sleeping on the ground after my landing, the Emperor had early notice of it by an express, and determined in council that I should be tied in the manner I have related (which was done in the night while I slept), that plenty of meat and drink should be sent me, and a machine prepared to carry me to the capital city.

This resolution perhaps may appear very bold and dangerous, and I am confident would not be imitated by any prince in Europe on the like occasion; however, in my opinion it was extremely prudent as well as generous. For supposing these people had endeavoured to kill me with their spears and arrows while I was asleep, I should certainly have awaked with the first sense of smart, which might so far have roused my

rage and strength, as to enable me to break the strings wherewith I was tied; after which, as they were not able to make resistance, so they could expect no mercy.

These people are most excellent mathematicians, and arrived to a great perfection in mechanics by the countenance and encouragement of the Emperor, who is a renowned patron of learning. This prince hath several machines fixed on wheels for the carriage of trees and other great weights. He often buildeth his largest men-of-war, whereof some are nine foot long, in the woods where the timber grows, and has them carried on these engines¹¹ three or four hundred yards to the sea. Five hundred carpenters and engineers were immediately set at work to prepare the greatest engine they had. It was a frame of wood raised three inches from the ground, about seven foot long and four wide, moving upon twenty-two wheels. The shout I heard was upon the arrival of this engine, which it seems set out in four hours after my landing. It was brought parallel to me as I lay. But the principal difficulty was to raise and place me in this vehicle. Eighty poles, each of one foot high, were erected for this purpose, and very strong cords of the bigness of pack-thread were fastened by hooks to many bandages, which the workmen had girt round my neck, my hands, my body, and my legs. Nine hundred of the strongest men were employed to draw up these cords by many pulleys fastened on the poles, and thus in less than three hours, I was raised and slung into the engine, and there tied fast. All this I was told, for while the whole operation was performing, I lay in a profound sleep, by the force of that soporiferous medicine infused into my liquor. Fifteen hundred of the Emperor's largest horses, each about four inches and a half high, were employed to draw me towards the metropolis, which, as I said, was half a mile distant.

About four hours after we began our journey, I awaked by a very ridiculous accident; for the carriage being stopped a while to adjust something that was out of order, two or three

of the young natives had the curiosity to see how I looked when I was asleep; they climbed up into the engine, and advancing very softly to my face, one of them, an officer in the Guards, put the sharp end of his half-pike a good way up into my left nostril, which tickled my nose like a straw, and made me sneeze violently: whereupon they stole off unperceived, and it was three weeks before I knew the cause of my awaking so suddenly. We made a long march the remaining part of that day, and rested at night with five hundred guards on each side of me, half with torches, and half with bows and arrows, ready to shoot me if I should offer to stir. The next morning at sunrise we continued our march, and arrived within two hundred yards of the city gates about noon. The Emperor and all his Court came out to meet us, but his great officers would by no means suffer his Majesty to endanger his person by mounting on my body.

At the place where the carriage stopped, there stood an ancient temple,¹² esteemed to be the largest in the whole kingdom, which having been polluted some years before by an unnatural murder, was, according to the zeal of those people, looked upon as profane, and therefore had been applied to common uses, and all the ornaments and furniture carried away. In this edifice it was determined I should lodge. The great gate fronting to the north was about four foot high, and almost two foot wide, through which I could easily creep. On each side of the gate was a small window not above six inches from the ground: into that on the left side, the King's smiths conveyed fourscore and eleven chains, like those that hang to a lady's watch in Europe, and almost as large, which were locked to my left leg with six and thirty padlocks. Over against this temple, on t'other side of the great highway, at twenty foot distance, there was a turret at least five foot high. Here the Emperor ascended with many principal lords of his Court, to have an opportunity of viewing me, as I was told, for I could not see them. It was reckoned

that above an hundred thousand inhabitants came out of the town upon the same errand; and in spite of my guards, I believe there could not be fewer than ten thousand, at several times, who mounted upon my body by the help of ladders. But a proclamation was soon issued to forbid it upon pain of death. When the workmen found it was impossible for me to break loose, they cut all the strings that bound me; whereupon I rose up with as melancholy a disposition as ever I had in my life. But the noise and astonishment of the people at seeing me rise and walk are not to be expressed. The chains that held my left leg were about two yards long, and gave me not only the liberty of walking backwards and forwards in a semicircle; but being fixed within four inches of the gate, allowed me to creep in, and lie at my full length in the temple.

CHAPTER 2

The Emperor of Lilliput, attended by several of the nobility, comes to see the author in his confinement. The Emperor's person and habit described. Learned men appointed to teach the author their language. He gains favour by his mild disposition. His pockets are searched, and his sword and pistols taken from him.

WHEN I found myself on my feet, I looked about me, and must confess I never beheld a more entertaining prospect. The country round appeared like a continued garden, and the inclosed fields, which were generally forty foot square, resembled so many beds of flowers. These fields were intermingled with woods of half a stang,¹³ and the tallest trees, as I could judge, appeared to be seven foot high. I viewed the town on my left hand, which looked like the painted scene of a city in a theatre.

I had been for some hours extremely pressed by the necessities of nature; which was no wonder, it being almost two days since I had last disburthened myself. I was under great

gracious protection, if I would continue in his service; wherein although I believed him sincere, yet I resolved never more to put any confidence in princes or ministers, where I could possibly avoid it; and therefore, with all due acknowledgements for his favourable intentions, I humbly begged to be excused. I told him, that since Fortune, whether good or evil, had thrown a vessel in my way, I was resolved to venture myself in the ocean, rather than be an occasion of difference between two such mighty monarchs. Neither did I find the Emperor at all displeased; and I discovered by a certain accident, that he was very glad of my resolution,⁵⁸ and so were most of his Ministers.

These considerations moved me to hasten my departure somewhat sooner than I intended; to which the Court, impatient to have me gone, very readily contributed. Five hundred workmen were employed to make two sails to my boat, according to my directions, by quilting thirteen fold of their strongest linen together. I was at the pains of making ropes and cables, by twisting ten, twenty or thirty of the thickest and strongest of theirs. A great stone that I happened to find, after a long search by the seashore, served me for an anchor. I had the tallow of three hundred cows for greasing my boat, and other uses. I was at incredible pains in cutting down some of the largest timber-trees for oars and masts, wherein I was, however, much assisted by his Majesty's ship-carpenters, who helped me in smoothing them, after I had done the rough work.

In about a month, when all was prepared, I sent to receive his Majesty's commands, and to take my leave. The Emperor and Royal Family came out of the palace; I lay down on my face to kiss his hand, which he very graciously gave me; so did the Empress, and young Princes of the Blood. His Majesty presented me with fifty purses of two hundred *sprugs* apiece, together with his picture at full length, which I put immediately into one of my gloves, to keep it from being hurt.

The ceremonies at my departure were too many to trouble the reader with at this time.

I stored the boat with the carcasses of an hundred oxen, and three hundred sheep, with bread and drink proportionable, and as much meat ready dressed as four hundred cooks could provide. I took with me six cows and two bulls alive, with as many ewes and rams, intending to carry them into my own country, and propagate the breed. And to feed them on board, I had a good bundle of hay, and a bag of corn. I would gladly have taken a dozen of the natives, but this was a thing the Emperor would by no means permit; and besides a diligent search into my pockets, his Majesty engaged my honour not to carry away any of his subjects, although with their own consent and desire.

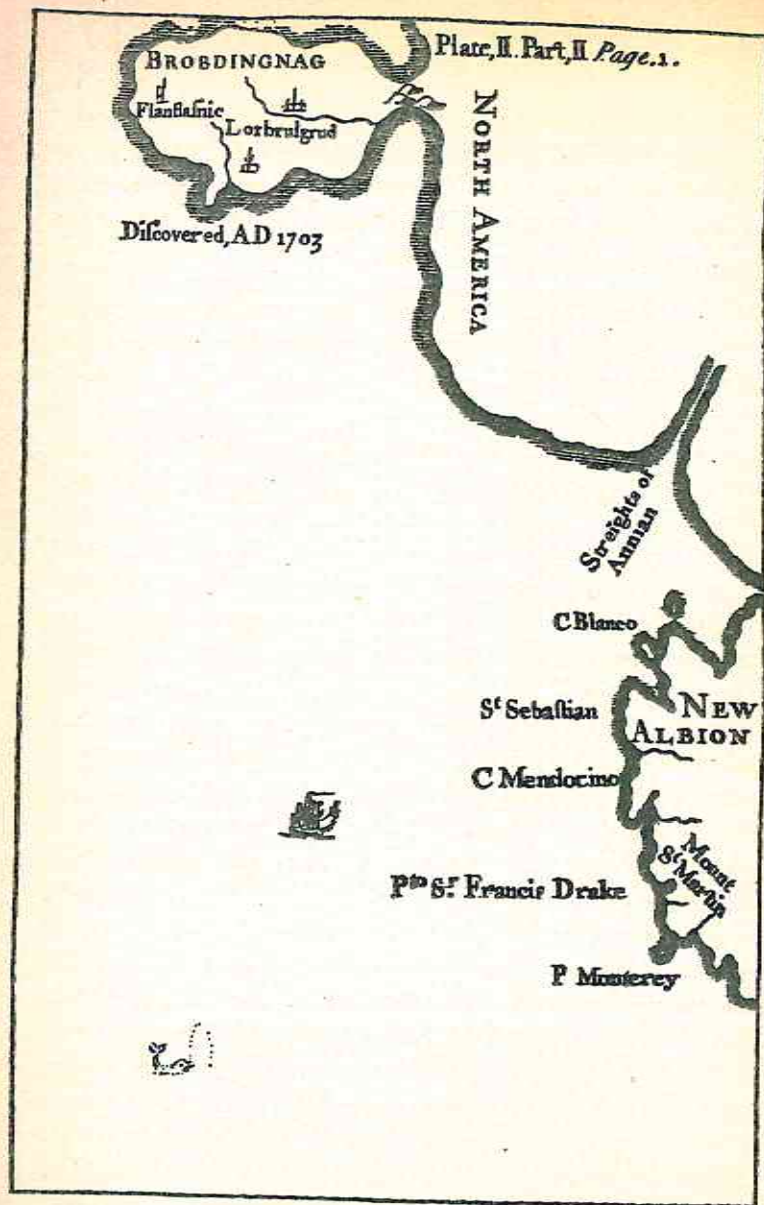

Having thus prepared all things as well as I was able, I set sail on the twenty-fourth day of September, 1701, at six in the morning; and when I had gone about four leagues to the northward, the wind being at south-east, at six in the evening, I descried a small island about half a league to the north-west. I advanced forward, and cast anchor on the lee-side of the island, which seemed to be uninhabited. I then took some refreshment, and went to my rest. I slept well, and as I conjecture at least six hours, for I found the day broke in two hours after I awaked. It was a clear night. I ate my breakfast before the sun was up; and heaving anchor, the wind being favourable, I steered the same course that I had done the day before, wherein I was directed by my pocket-compass. My intention was to reach, if possible, one of those islands, which I had reason to believe lay to the north-east of Van Diemen's Land. I discovered nothing all that day; but upon the next, about three in the afternoon, when I had by my computation made twenty-four leagues from Blefuscu, I descried a sail steering to the south-east; my course was due east. I hailed her, but could get no answer; yet I found I gained upon her, for the wind slackened. I made all the sail I could, and in half an

hour she spied me, then hung out her ancient,⁵⁹ and discharged a gun. It is not easy to express the joy I was in upon the unexpected hope of once more seeing my beloved country, and the dear pledges I had left in it. The ship slackened her sails, and I came up with her between five and six in the evening, September 26; but my heart leapt within me to see her English colours. I put my cows and sheep into my coat-pockets, and got on board with all my little cargo of provisions. The vessel was an English merchantman, returning from Japan by the North and South Seas;⁶⁰ the captain, Mr John Biddel of Deptford, a very civil man, and an excellent sailor. We were now in the latitude of 30 degrees south; there were about fifty men in the ship; and here I met an old comrade of mine, one Peter Williams, who gave me a good character to the captain. This gentleman treated me with kindness, and desired I would let him know what place I came from last, and whither I was bound; which I did in few words, but he thought I was raving, and that the dangers I underwent had disturbed my head; whereupon I took my black cattle and sheep out of my pocket, which, after great astonishment, clearly convinced him of my veracity. I then showed him the gold given me by the Emperor of Blefuscu, together with his Majesty's picture at full length, and some other rarities of that country. I gave him two purses of two hundred *sprugs* each, and promised, when we arrived in England, to make him a present of a cow and a sheep big with young.

I shall not trouble the reader with a particular account of this voyage, which was very prosperous for the most part. We arrived in the Downs on the 13th of April, 1702. I had only one misfortune, that the rats on board carried away one of my sheep; I found her bones in a hole, picked clean from the flesh. The rest of my cattle I got safe on shore, and set them a grazing in a bowling-green at Greenwich, where the fineness of the grass made them feed very heartily, though I had always feared the contrary: neither could I possibly have

preserved them in so long a voyage, if the captain had not allowed me some of his best biscuit, which, rubbed to powder, and mingled with water, was their constant food. The short time I continued in England, I made a considerable profit by showing my cattle to many persons of quality, and others: and before I began my second voyage, I sold them for six hundred pounds. Since my last return, I find the breed is considerably increased, especially the sheep; which I hope will prove much to the advantage of the woollen manufacture, by the fineness of the fleeces.

I stayed but two months with my wife and family; for my insatiable desire of seeing foreign countries would suffer me to continue no longer. I left fifteen hundred pounds with my wife, and fixed her in a good house at Redriff. My remaining stock I carried with me, part in money, and part in goods, in hopes to improve my fortunes. My eldest uncle John had left me an estate in land, near Epping, of about thirty pounds a year; and I had a long lease of the Black Bull in Fetter Lane, which yielded me as much more: so that I was not in any danger of leaving my family upon the parish. My son Johnny, named so after his uncle, was at the grammar school, and a towardly⁶¹ child. My daughter Betty (who is now well married, and has children) was then at her needlework. I took leave of my wife, and boy and girl, with tears on both sides, and went on board the *Adventure*, a merchant-ship of three hundred tons, bound for Surat, Captain John Nicholas of Liverpool, commander. But my account of this voyage must be referred to the second part of my Travels.

CHAPTER I

A great storm described. The long-boat sent to fetch water, the author goes with it to discover the country. He is left on shore, is seized by one of the natives, and carried to a farmer's house. His reception there, with several accidents that happened there. A description of the inhabitants.

HAVING been condemned by Nature and Fortune to an active and restless life, in two months after my return I again left my native country, and took shipping in the Downs on the 20th day of June, 1702, in the *Adventure*, Capt. John Nicholas, a Cornish man, commander, bound for Surat. We had a very prosperous gale¹ till we arrived at the Cape of Good Hope, where we landed for fresh water, but discovering a leak we unshipped our goods, and wintered there; for the captain falling sick of an ague, we could not leave the Cape till the end of March. We then set sail, and had a good voyage till we passed the Straits of Madagascar; but having got northward of that island, and to about five degrees south latitude, the winds, which in those seas are observed to blow a constant equal gale between the north and west from the beginning of December to the beginning of May, on the 19th of April began to blow with much greater violence, and more westerly than usual, continuing so for twenty days together, during which time we were driven a little to the east of the Molucca Islands, and about three degrees northward of the Line, as our captain found by an observation he took the 2nd of May, at which time the wind ceased, and it was a perfect calm, whereat I was not a little rejoiced. But he, being a man well experienced in the navigation of those seas, bid us all prepare against a storm, which accordingly happened the day following: for a southern wind, called the southern *monsoon*, began to set in.

Finding it was like to overblow,² we took in our spritsail, and stood by to hand the fore-sail; but making foul weather,

we looked the guns were all fast, and handed the mizen. The ship lay very broad off, so we thought it better spooning before the sea, than trying or hulling. We reefed the fore-sail and set him, we hauled aft the fore-sheet; the helm was hard a-weather. The ship wore bravely. We belayed the fore-down-haul; but the sail was split, and we hauled down the yard, and got the sail into the ship, and unbound all the things clear of it. It was a very fierce storm; the sea broke strange and dangerous. We hauled off upon the lanyard of the whipstaff, and helped the man at helm. We would not get down our topmast, but let all stand, because she scudded before the sea very well, and we knew that the topmast being aloft, the ship was the wholesomer, and made better way through the sea, seeing we had sea-room. When the storm was over, we set fore-sail and mainsail, and brought the ship to. Then we set the mizen, main-topsail and the fore-topsail. Our course was east-north-east, the wind was at south-west. We got the starboard tacks aboard, we cast off our weather-braces and lifts; we set in the lee-braces, and hauled forward by the weather-bowlings, and hauled them tight, and belayed them, and hauled over the mizen tack to windward, and kept her full and by as near as she would lie.

During this storm, which was followed by a strong wind west-south-west, we were carried by my computation about five hundred leagues to the east, so that the oldest sailor on board could not tell in what part of the world we were. Our provisions held out well, our ship was staunch, and our crew all in good health; but we lay in the utmost distress for water. We thought it best to hold on the same course rather than turn more northerly, which might have brought us to the north-west parts of Great Tartary,³ and into the frozen sea.⁴

On the 16th day of June, 1703, a boy on the topmast discovered land. On the 17th we came in full view of a great island or continent (for we knew not whether),⁵ on the south side whereof was a small neck of land jutting out into the sea,

and a creek too shallow to hold a ship of above one hundred tons. We cast anchor within a league of this creek, and our captain sent a dozen of his men well armed in the long-boat, with vessels for water if any could be found. I desired his leave to go with them, that I might see the country, and make what discoveries I could. When we came to land we saw no river or spring, nor any sign of inhabitants. Our men therefore wandered on the shore to find out some fresh water near the sea, and I walked alone about a mile on the other side, where I observed the country all barren and rocky. I now began to be weary, and seeing nothing to entertain my curiosity, I returned gently down towards the creek; and the sea being full in my view, I saw our men already got into the boat, and rowing for life to the ship. I was going to hollow after them, although it had been to little purpose, when I observed a huge creature walking after them in the sea, as fast as he could: he waded not much deeper than his knees, and took prodigious strides: but our men had the start of him half a league, and the sea thereabouts being full of sharp-pointed rocks, the monster was not able to overtake the boat. This I was afterwards told, for I durst not stay to see the issue of that adventure; but ran as fast as I could the way I first went; and then climbed up a steep hill, which gave me some prospect of the country. I found it fully cultivated; but that which first surprised me was the length of the grass, which in those grounds that seemed to be kept for hay, was above twenty foot high.

I fell into a high road, for so I took it to be, though it served to the inhabitants only as a footpath through a field of barley. Here I walked on for some time, but could see little on either side, it being now near harvest, and the corn rising at least forty foot. I was an hour walking to the end of this field, which was fenced in with a hedge of at least one hundred and twenty foot high, and the trees so lofty that I could make no computation of their altitude. There was a stile to pass from this field into the next. It had four steps, and a stone to cross

over when you came to the uppermost. It was impossible for me to climb this stile, because every step was six foot high, and the upper stone above twenty. I was endeavouring to find some gap in the hedge, when I discovered one of the inhabitants in the next field advancing towards the stile, of the same size with him whom I saw in the sea pursuing our boat. He appeared as tall as an ordinary spire-steeple, and took about ten yards at every stride, as near as I could guess. I was struck with the utmost fear and astonishment, and ran to hide myself in the corn, from whence I saw him at the top of the stile, looking back into the next field on the right hand, and heard him call in a voice many degrees louder than a speaking-trumpet; but the noise was so high in the air, that at first I certainly thought it was thunder. Whereupon seven monsters like himself came towards him with reaping-hooks in their hands, each hook about the largeness of six scythes. These people were not so well clad as the first, whose servants or labourers they seemed to be. For, upon some words he spoke, they went to reap the corn in the field where I lay. I kept from them at as great a distance as I could, but was forced to move with extreme difficulty, for the stalks of the corn were sometimes not above a foot distant, so that I could hardly squeeze my body betwixt them. However, I made a shift to go forward till I came to a part of the field where the corn had been laid by the rain and wind. Here it was impossible for me to advance a step: for the stalks were so interwoven that I could not creep through, and the beards of the fallen ears so strong and pointed that they pierced through my clothes into my flesh. At the same time I heard the reapers not above an hundred yards behind me. Being quite dispirited with toil, and wholly overcome by grief and despair, I lay down between two ridges, and heartily wished I might there end my days. I bemoaned my desolate widow, and fatherless children. I lamented my own folly and wilfulness in attempting a second voyage against the advice of all my friends and relations. In

this terrible agitation of mind I could not forbear thinking of Lilliput, whose inhabitants looked upon me as the greatest prodigy that ever appeared in the world: where I was able to draw an imperial fleet in my hand, and perform those other actions which will be recorded for ever in the chronicles of that Empire, while posterity shall hardly believe them, although attested by millions. I reflected what a mortification it must prove to me to appear as inconsiderable in this nation as one single Lilliputian would be among us. But this I conceived was to be the least of my misfortunes: for, as human creatures are observed to be more savage and cruel in proportion to their bulk, what could I expect but to be a morsel in the mouth of the first among these enormous barbarians who should happen to seize me? Undoubtedly philosophers are in the right when they tell us, that nothing is great or little otherwise than by comparison.⁶ It might have pleased Fortune to let the Lilliputians find some nation, where the people were as diminutive with respect to them, as they were to me. And who knows but that even this prodigious race of mortals might be equally overmatched in some distant part of the world, whereof we have yet no discovery?

Scared and confounded as I was, I could not forbear going on with these reflections, when one of the reapers approaching within ten yards of the ridge where I lay, made me apprehend that with the next step I should be squashed to death under his foot, or cut in two with his reaping-hook. And therefore when he was again about to move, I screamed as loud as fear could make me. Whereupon the huge creature trod short, and looking round about under him for some time, at last espied me as I lay on the ground. He considered a while with the caution of one who endeavours to lay hold on a small dangerous animal in such a manner that it shall not be able either to scratch or to bite him, as I myself have sometimes done with a weasel in England. At length he ventured to take me up behind by the middle between his forefinger and

thumb, and brought me within three yards of his eyes, that he might behold my shape more perfectly. I guessed his meaning, and my good fortune gave me so much presence of mind, that I resolved not to struggle in the least as he held me in the air above sixty foot from the ground, although he grievously pinched my sides, for fear I should slip through his fingers. All I ventured was to raise mine eyes towards the sun, and place my hands together in a supplicating posture, and to speak some words in an humble melancholy tone, suitable to the condition I then was in. For I apprehended every moment that he would dash me against the ground, as we usually do any little hateful animal which we have a mind to destroy. But my good star would have it, that he appeared pleased with my voice and gestures, and began to look upon me as a curiosity, much wondering to hear me pronounce articulate words, although he could not understand them. In the meantime I was not able to forbear groaning and shedding tears, and turning my head towards my sides; letting him know, as well as I could, how cruelly I was hurt by the pressure of his thumb and finger. He seemed to apprehend my meaning; for, lifting up the lappet of his coat, he put me gently into it, and immediately ran along with me to his master, who was a substantial farmer, and the same person I had first seen in the field.

The farmer having (as I supposed by their talk) received such an account of me as his servant could give him, took a piece of a small straw, about the size of a walking-staff, and therewith lifted up the lappets of my coat; which it seems he thought to be some kind of covering that nature had given me. He blew my hairs aside to take a better view of my face. He called his hinds⁷ about him, and asked them (as I afterwards learned) whether they had ever seen in the fields any little creature that resembled me. He then placed me softly on the ground upon all four, but I got immediately up, and walked slowly backwards and forwards, to let those people see I had no intent to run away. They all sat down in a circle about me,

the better to observe my motions. I pulled off my hat, and made a low bow towards the farmer. I fell on my knees, and lifted up my hands and eyes, and spoke several words as loud as I could: I took a purse of gold out of my pocket, and humbly presented it to him. He received in on the palm of his hand, then applied it close to his eye, to see what it was, and afterwards turned it several times with the point of a pin (which he took out of his sleeve), but could make nothing of it. Whereupon I made a sign that he should place his hand on the ground. I then took the purse, and opening it, poured all the gold into his palm. There were six Spanish pieces of four pistoles each, besides twenty or thirty smaller coins. I saw him wet the tip of his little finger upon his tongue, and take up one of my largest pieces, and then another, but he seemed to be wholly ignorant what they were. He made me a sign to put them again into my purse, and the purse again into my pocket, which after offering to him several times, I thought it best to do.

The farmer by this time was convinced I must be a rational creature. He spoke often to me, but the sound of his voice pierced my ears like that of a watermill, yet his words were articulate enough. I answered as loud as I could in several languages, and he often laid his ear within two yards of me, but all in vain, for we were wholly unintelligible to each other. He then sent his servants to their work, and taking his handkerchief out of his pocket, he doubled and spread it on his left hand, which he placed flat on the ground with the palm upwards, making me a sign to step into it, as I could easily do, for it was not above a foot in thickness. I thought it my part to obey; and for fear of falling, laid myself at full length upon the handkerchief, with the remainder of which he lapped me up to the head for further security, and in this manner carried me home to his house. There he called his wife, and showed me to her; but she screamed and ran back as women in England do at the sight of a toad or a spider.

However, when she had a while seen my behaviour, and how well I observed the signs her husband made, she was soon reconciled, and by degrees grew extremely tender of me.

It was about twelve at noon, and a servant brought in dinner. It was only one substantial dish of meat (fit for the plain condition of an husbandman) in a dish of about four and twenty foot diameter. The company were the farmer and his wife, three children, and an old grandmother: when they were sat down, the farmer placed me at some distance from him on the table, which was thirty foot high from the floor. I was in a terrible fright, and kept as far as I could from the edge for fear of falling. The wife minced a bit of meat, then crumbled some bread on a trencher, and placed it before me. I made her a low bow, took out my knife and fork, and fell to eat, which gave them exceeding delight. The mistress sent her maid for a small dram-cup, which held about two gallons, and filled it with drink; I took up the vessel with much difficulty in both hands, and in a most respectful manner drank to her ladyship's health, expressing the words as loud as I could in English, which made the company laugh so heartily, that I was almost deafened with the noise. This liquor tasted like a small cider, and was not unpleasant. Then the master made me a sign to come to his trencher side; but as I walked on the table, being in great surprise all the time, as the indulgent reader will easily conceive and excuse, I happened to stumble against a crust, and fell flat on my face, but received no hurt. I got up immediately, and observing the good people to be in much concern, I took my hat (which I held under my arm out of good manners) and waving it over my head, made three huzzas, to show I had got no mischief by the fall. But advancing forwards toward my master (as I shall henceforth call him) his youngest son who sat next him, an arch boy of about ten years old, took me up by the legs, and held me so high in the air, that I trembled every limb; but his father snatched me from him, and at the same time gave him such a box on the

left ear, as would have felled an European troop of horse to the earth, ordering him to be taken from the table. But, being afraid the boy might owe me a spite, and well remembering how mischievous all children among us naturally are to sparrows, rabbits, young kittens, and puppy dogs, I fell on my knees, and pointing to the boy, made my master understand, as well as I could, that I desired his son might be pardoned. The father complied, and the lad took his seat again; whereupon I went to him and kissed his hand, which my master took, and made him stroke me gently with it.

In the midst of dinner my mistress's favourite cat leapt into her lap. I heard a noise behind me like that of a dozen stocking-weavers at work; and turning my head I found it proceeded from the purring of this animal, who seemed to be three times larger than an ox, as I computed by the view of her head, and one of her paws, while her mistress was feeding and stroking her. The fierceness of this creature's countenance altogether discomposed me; though I stood at the farther end of the table, above fifty foot off, and although my mistress held her fast for fear she might give a spring, and seize me in her talons. But it happened there was no danger; for the cat took not the least notice of me when my master placed me within three yards of her. And as I have been always told, and found true by experience in my travels, that flying, or discovering fear before a fierce animal, is a certain way to make it pursue or attack you, so I resolved in this dangerous juncture to show no manner of concern. I walked with intrepidity five or six times before the very head of the cat, and came within half a yard of her; whereupon she drew herself back, as if she were more afraid of me: I had less apprehension concerning the dogs, whereof three or four came into the room, as it is usual in farmers' houses; one of which was a mastiff equal in bulk to four elephants, and a greyhound somewhat taller than the mastiff, but not so large.

When dinner was almost done, the nurse came in with a

CHAPTER 8

The King and Queen make a progress to the frontiers. The author attends them. The manner in which he leaves the country very particularly related. He returns to England.

I HAD always a strong impulse that I should sometime recover my liberty, though it were impossible to conjecture by what means, or to form any project with the least hope of succeeding. The ship in which I sailed was the first ever known to be driven within sight of that coast, and the King had given strict orders, that if at any time another appeared, it should be taken ashore, and with all its crew and passengers brought in a tumbril to Lorbrulgrud. He was strongly bent to get me a woman of my own size, by whom I might propagate the breed: but I think I should rather have died than undergone the disgrace of leaving a posterity to be kept in cages like tame canary birds, and perhaps in time sold about the kingdom to persons of quality for curiosities. I was indeed treated with much kindness; I was the favourite of a great King and Queen, and the delight of the whole Court, but it was upon such a foot as ill became the dignity of human kind. I could never forget those domestic pledges I had left behind me. I wanted to be among people with whom I could converse upon even terms, and walk about the streets and fields without fear of being trod to death like a frog or a young puppy. But, my deliverance came sooner than I expected, and in a manner not very common: the whole story and circumstances of which I shall faithfully relate.

I had now been two years in this country; and about the beginning of the third, Glumdalclitch and I attended the King and Queen in a progress to the south coast of the kingdom. I was carried as usual in my travelling-box, which, as I have already described, was a very convenient closet of twelve foot wide. I had ordered a hammock to be fixed by silken ropes

from the four corners at the top, to break the jolts, when a servant carried me before him on horseback, as I sometimes desired, and would often sleep in my hammock while we were upon the road. On the roof of my closet, set not directly over the middle of the hammock, I ordered the joiner to cut out a hole of a foot square to give me air in hot weather as I slept, which hole I shut at pleasure with a board that drew backwards and forwards through a groove.

When we came to our journey's end, the King thought proper to pass a few days at a palace he hath near Flanflasnic, a city within eighteen English miles of the seaside. Glumdalclitch and I were much fatigued; I had gotten a small cold, but the poor girl was so ill as to be confined to her chamber. I longed to see the ocean, which must be the only scene of my escape, if ever it should happen. I pretended to be worse than I really was, and desired leave to take the fresh air of the sea, with a page whom I was very fond of, and who had sometimes been trusted with me. I shall never forget with what unwillingness Glumdalclitch consented, nor the strict charge she gave the page to be careful of me, bursting at the same time into a flood of tears, as if she had some foreboding of what was to happen. The boy took me out in my box about half an hour's walk from the palace towards the rocks on the seashore. I ordered him to set me down, and lifting up one of my sashes, cast many a wistful melancholy look towards the sea. I found myself not very well, and told the page that I had a mind to take a nap in my hammock, which I hoped would do me good. I got in, and the boy shut the window close down to keep out the cold. I soon fell asleep, and all I can conjecture is, that while I slept, the page, thinking no danger could happen, went among the rocks to look for birds' eggs, having before observed him from my window searching about, and picking up one or two in the clefts. Be that as it will, I found myself suddenly awaked with a violent pull upon the ring which was fastened at the top of my box for the conveniency

of carriage. I felt the box raised very high in the air, and then borne forward with prodigious speed. The first jolt had like to have shaken me out of my hammock, but afterwards the motion was easy enough. I called out several times as loud as I could raise my voice, but all to no purpose. I looked towards my windows, and could see nothing but the clouds and sky. I heard a noise just over my head like the clapping of wings, and then began to perceive the woeful condition I was in; that some eagle had got the ring of my box in his beak, with an intent to let it fall on a rock like a tortoise in a shell, and then pick out my body and devour it. For the sagacity and smell of this bird enable him to discover his quarry at a great distance, though better concealed than I could be within a two-inch board.

In a little time I observed the noise and flutter of wings to increase very fast, and my box was tossed up and down like a signpost in a windy day. I heard several bangs or buffets, as I thought, given to the eagle (for such I am certain it must have been that held the ring of my box in his beak) and then all on a sudden felt myself falling perpendicularly down for above a minute, but with such incredible swiftness that I almost lost my breath. My fall was stopped by a terrible squash, that sounded louder to mine ears than the cataract of Niagara; after which I was quite in the dark for another minute, and then my box began to rise so high that I could see light from the tops of my windows. I now perceived that I was fallen into the sea. My box, by the weight of my body, the goods that were in, and the broad plates of iron fixed for strength at the four corners of the top and bottom, floated about five foot deep in water. I did then, and do now suppose that the eagle which flew away with my box was pursued by two or three others, and forced to let me drop while he was defending himself against the rest, who hoped to share in the prey. The plates of iron fastened at the bottom of the box (for those were the strongest) preserved the balance while it fell, and

hindered it from being broken on the surface of the water. Every joint of it was well grooved, and the door did not move on hinges, but up and down like a sash, which kept my closet so tight that very little water came in. I got with much difficulty out of my hammock, having first ventured to draw back the slip-board on the roof already mentioned, contrived on purpose to let in air, for want of which I found myself almost stifled.

How often did I then wish myself with my dear Glumdalclitch, from whom one single hour had so far divided me! And I may say with truth, that in the midst of my own misfortunes I could not forbear lamenting my poor nurse, the grief she would suffer for my loss, the displeasure of the Queen, and the ruin of her fortune. Perhaps many travellers have not been under greater difficulties and distress than I was at this juncture, expecting every moment to see my box dashed in pieces, or at least overset by the first violent blast, or a rising wave. A breach in one single pane of glass would have been immediate death: nor could anything have preserved the windows but the strong lattice wires placed on the outside against accidents in travelling. I saw the water ooze in at several crannies, although the leaks were not considerable, and I endeavoured to stop them as well as I could. I was not able to lift up the roof of my closet, which otherwise I certainly should have done, and sat on the top of it, where I might at least preserve myself from being shut up, as I may call it, in the hold. Or, if I escaped these dangers for a day or two, what could I expect but a miserable death of cold and hunger! I was four hours under these circumstances, expecting and indeed wishing every moment to be my last.

I have already told the reader, that there were two strong staples fixed upon the side of my box which had no window, and into which the servant who used to carry me on horseback would put a leathern belt, and buckle it about his waist. Being in this disconsolate state, I heard or at least thought I heard

some kind of grating noise on that side of my box where the staples were fixed, and soon after I began to fancy that the box was pulled, or towed along in the sea; for I now and then felt a sort of tugging which made the waves rise near the tops of my windows, leaving me almost in the dark. This gave me some faint hopes of relief, although I were not able to imagine how it could be brought about. I ventured to unscrew one of my chairs, which were always fastened to the floor; and having made a hard shift to screw it down again directly under the slipping-board that I had lately opened, I mounted on the chair, and putting my mouth as near as I could to the hole, I called for help in a loud voice, and in all the languages I understood. I then fastened my handkerchief to a stick I usually carried, and thrusting it up the hole, waved it several times in the air, that if any boat or ship were near, the seamen might conjecture some unhappy mortal to be shut up in the box.

I found no effect from all I could do, but plainly perceived my closet to be moved along; and in the space of an hour, or better, that side of the box where the staples were, and had no window, struck against something that was hard. I apprehended it to be a rock, and found myself tossed more than ever. I plainly heard a noise upon the cover of my closet, like that of a cable, and the grating of it as it passed through the ring. I then found myself hoisted up by degrees at least three foot higher than I was before. Whereupon, I again thrust up my stick and handkerchief, calling for help till I was almost hoarse. In return to which, I heard a great shout repeated three times, giving me such transports of joy as are not to be conceived but by those who feel them. I now heard a trampling over my head, and somebody calling through the hole with a loud voice in the English tongue: *If there be anybody below let them speak.* I answered, I was an Englishman, drawn by ill fortune into the greatest calamity that ever any creature underwent, and begged, by all that was moving, to be

delivered out of the dungeon I was in. The voice replied, I was safe, for my box was fastened to their ship; and the carpenter should immediately come, and saw an hole in the cover, large enough to pull me out. I answered, that was needless, and would take up too much time, for there was no more to be done, but let one of the crew put his finger into the ring, and take the box out of the sea into the ship, and so into the captain's cabin. Some of them upon hearing me talk so wildly thought I was mad; others laughed; for indeed it never came into my head that I was now got among people of my own stature and strength. The carpenter came, and in a few minutes sawed a passage about four foot square, then let down a small ladder, upon which I mounted, and from thence was taken into the ship in a very weak condition.

The sailors were all in amazement, and asked me a thousand questions, which I had no inclination to answer. I was equally confounded at the sight of so many pygmies, for such I took them to be, after having so long accustomed mine eyes to the monstrous objects I had left. But the captain, Mr Thomas Wilcocks, an honest worthy Shropshire man, observing I was ready to faint, took me into his cabin, gave me a cordial to comfort me, and made me *turn in* upon his own bed, advising me to take a little rest, of which I had great need. Before I went to sleep I gave him to understand that I had some valuable furniture in my box, too good to be lost; a fine hammock, an handsome field-bed, two chairs, a table and a cabinet: that my closet was hung on all sides, or rather quilted, with silk and cotton: that if he would let one of the crew bring my closet into his cabin, I would open it before him, and show him my goods. The captain, hearing me utter these absurdities, concluded I was raving: however (I suppose to pacify me), he promised to give order as I desired, and going upon deck, sent some of his men down into my closet, from whence (as I afterwards found) they drew up all my goods, and stripped off the quilting; but the chairs, cabinet and bedstead,

being screwed to the floor, were much damaged by the ignorance of the seamen, who tore them up by force. Then they knocked off some of the boards for the use of the ship, and when they had got all they had a mind for, let the hulk drop into the sea, which, by reason of many breaches made in the bottom and sides, sunk *to rights*. And indeed I was glad not to have been a spectator of the havoc they made; because I am confident it would have sensibly touched me, by bringing former passages into my mind, which I had rather forget.

I slept some hours, but perpetually disturbed with dreams of the place I had left, and the dangers I had escaped. However, upon waking I found myself much recovered. It was now about eight o'clock at night, and the captain ordered supper immediately, thinking I had already fasted too long. He entertained me with great kindness, observing me not to look wildly, or talk inconsistently; and when we were left alone, desired I would give him a relation of my travels, and by what accident I came to be set adrift in that monstrous wooden chest. He said, that about twelve o'clock at noon, as he was looking through his glass, he spied it at a distance, and thought it was a sail, which he had a mind to make, being not much out of his course, in hopes of buying some biscuit, his own beginning to fall short. That, upon coming nearer, and finding his error, he sent out his long-boat to discover what I was; that his men came back in a fright, swearing they had seen a swimming house. That he laughed at their folly, and went himself in the boat, ordering his men to take a strong cable along with them. That the weather being calm, he rowed round me several times, observed my windows, and the wire lattices that defended them. That he discovered two staples upon one side, which was all of boards, without any passage for light. He then commanded his men to row up to that side, and fastening a cable to one of the staples, ordered his men to tow my chest (as he called it) towards the ship. When it was there, he gave directions to fasten another cable

to the ring fixed in the cover, and to raise up my chest with pulleys, which all the sailors were not able to do above two or three foot. He said, they saw my stick and handkerchief thrust out of the hole, and concluded that some unhappy man must be shut up in the cavity. I asked whether he or the crew had seen any prodigious birds in the air about the time he first discovered me. To which he answered, that discoursing this matter with the sailors while I was asleep, one of them said he had *observed* three eagles flying towards the north, but remarked nothing of their being larger than the usual size, which I suppose must be imputed to the great height they were at: and he could not guess the reason of my question. I then asked the captain how far he reckoned we might be from land; he said, by the best computation he could make, we were at least an hundred leagues. I assured him, that he must be mistaken by almost half, for I had not left the country from whence I came above two hours before I dropped into the sea. Whereupon he began again to think that my brain was disturbed, of which he gave me a hint, and advised me to go to bed in a cabin he had provided. I assured him I was well refreshed with his good entertainment and company, and as much in my senses as ever I was in my life. He then grew serious, and desired to ask me freely whether I were not troubled in mind by the consciousness of some enormous crime, for which I was punished at the command of some prince, by exposing me in that chest, as great criminals in other countries have been forced to sea in a leaky vessel without provisions: for, although he should be sorry to have taken so ill a man into his ship, yet he would engage his word to set me safe on shore in the first port where we arrived. He added, that his suspicions were much increased by some very absurd speeches I had delivered at first to the sailors, and afterwards to himself, in relation to my closet or chest, as well as by my odd looks and behaviour while I was at supper.

I begged his patience to hear me tell my story, which I

faithfully did from the last time I left England to the moment he first discovered me. And, as truth always forceth its way into rational minds, so this honest worthy gentleman, who had some tincture of learning, and very good sense, was immediately convinced of my candour and veracity. But, further to confirm all I had said, I entreated him to give order that my cabinet should be brought, of which I kept the key in my pocket (for he had already informed me how the seamen disposed of my closet); I opened it in his presence, and showed him the small collection of rarities I made in the country from whence I had been so strangely delivered. There was the comb I had contrived out of the stumps of the King's beard, and another of the same materials, but fixed into a paring of her Majesty's thumb-nail, which served for the back. There was a collection of needles and pins from a foot to half a yard long. Four wasp-stings, like joiners' tacks: some combings of the Queen's hair: a gold ring which one day she made me a present of in a most obliging manner, taking it from her little finger, and throwing it over my head like a collar. I desired the captain would please to accept this ring in return of his civilities, which he absolutely refused. I showed him a corn that I had cut off with my own hand from a Maid of Honour's toe; it was about the bigness of a Kentish pippin, and grown so hard, that when I returned to England, I got it hollowed into a cup and set in silver. Lastly, I desired him to see the breeches I had then on, which were made of a mouse's skin.

I could force nothing on him but a footman's tooth, which I observed him to examine with great curiosity, and found he had a fancy for it. He received it with abundance of thanks, more than such a trifle could deserve. It was drawn by an unskilful surgeon in a mistake from one of Glumdalclitch's men, who was afflicted with the toothache, but it was as sound as any in his head. I got it cleaned, and put it into my cabinet. It was about a foot long, and four inches in diameter.

The captain was very well satisfied with this plain relation I

had given him; and said, he hoped when we returned to England, I would oblige the world by putting it in paper, and making it public. My answer was, that I thought we were already overstocked with books of travels: that nothing could now pass which was not extraordinary, wherein I doubted some authors less consulted truth than their own vanity or interest, or the diversion of ignorant readers. That my story could contain little besides common events, without those ornamental descriptions of strange plants, trees, birds, and other animals, or the barbarous customs and idolatry of savage people, with which most writers abound. However, I thanked him for his good opinion, and promised to take the matter into my thoughts.

He said he wondered at one thing very much, which was to hear me speak so loud, asking me whether the King or Queen of that country were thick of hearing. I told him it was what I had been used to for above two years past, and that I admired as much at the voices of him and his men, who seemed to me only to whisper, and yet I could hear them well enough. But, when I spoke in that country, it was like a man talking in the street to another looking out from the top of a steeple, unless when I was placed on a table, or held in any person's hand. I told him I had likewise observed another thing, that when I first got into the ship, and the sailors stood all about me, I thought they were the most little contemptible creatures I had ever beheld. For, indeed, while I was in that Prince's country, I could never endure to look in a glass after mine eyes had been accustomed to such prodigious objects, because the comparison gave me so despicable a conceit of myself. The captain said, that while we were at supper, he observed me to look at everything with a sort of wonder, and that I often seemed hardly able to contain my laughter, which he knew not well how to take, but imputed it to some disorder in my brain. I answered, it was very true, and I wondered how I could forbear, when I saw his dishes of the size of a silver threepence,

a leg of pork hardly a mouthful, a cup not so big as a nutshell: and so I went on, describing the rest of his household-stuff and provisions after the same manner. For although the Queen had ordered a little equipage of all things necessary for me while I was in her service, yet my ideas were wholly taken up with what I saw on every side of me, and I winked at my own littleness as people do at their own faults. The captain understood my raillery very well, and merrily replied with the old English proverb, that he doubted mine eyes were bigger than my belly, for he did not observe my stomach so good, although I had fasted all day; and continuing in his mirth, protested he would have gladly given an hundred pounds to have seen my closet in the eagle's bill, and afterwards in its fall from so great an height into the sea; which would certainly have been a most astonishing object, worthy to have the description of it transmitted to future ages: and the comparison of Phaethon⁴¹ was so obvious, that he could not forbear applying it, although I did not much admire the conceit.

The captain, having been at Tonquin,⁴² was in his return to England driven north-eastward to the latitude of 44 degrees, and of longitude 143. But meeting a trade wind two days after I came on board him, we sailed southward a long time, and coasting New Holland⁴³ kept our course west-south-west, and then south-south-west till we doubled the Cape of Good Hope. Our voyage was very prosperous, but I shall not trouble the reader with a journal of it. The captain called in at one or two ports and sent in his long-boat for provisions and fresh water, but I never went out of the ship till we came into the Downs, which was on the 3rd day of June, 1706, about nine months after my escape. I offered to leave my goods in security for payment of my freight; but the captain protested he would not receive one farthing. We took kind leave of each other, and I made him promise he would come to see me at my house in Redriff. I hired a horse and guide for five shillings, which I borrowed of the captain.

As I was on the road, observing the littleness of the houses, the trees, the cattle and the people, I began to think myself in Lilliput. I was afraid of trampling on every traveller I met, and often called aloud to have them stand out of the way, so that I had like to have gotten one or two broken heads for my impertinence.

When I came to my own house, for which I was forced to enquire, one of the servants opening the door, I bent down to go in (like a goose under a gate) for fear of striking my head. My wife ran out to embrace me, but I stooped lower than her knees, thinking she could otherwise never be able to reach my mouth. My daughter kneeled to ask me blessing, but I could not see her till she arose, having been so long used to stand with my head and eyes erect to above sixty foot; and then I went to take her up with one hand, by the waist. I looked down upon the servants and one or two friends who were in the house, as if they had been pygmies, and I a giant. I told my wife she had been too thrifty, for I found she had starved herself and her daughter to nothing. In short, I behaved myself so unaccountably, that they were all of the captain's opinion when he first saw me, and concluded I had lost my wits. This I mention as an instance of the great power of habit and prejudice.

In a little time I and my family and friends came to a right understanding: but my wife protested I should never go to sea any more; although my evil destiny so ordered that she had not power to hinder me, as the reader may know hereafter. In the meantime I here conclude the second part of my unfortunate Voyages.

TRAVELS · PART III
A VOYAGE TO LAPUTA, BALNIBARBI,
GLUBBDUBDRIB, LUGGNAGG
AND JAPAN

*

were not ready, nor could he expect to be dispatched in several months. Therefore in hopes to defray some of the charges he must be at, he bought a sloop, loaded it with several sorts of goods, wherewith the Tonquinese usually trade to the neighbouring islands, and putting fourteen men on board, whereof three were of the country, he appointed me master of the sloop, and gave me power to traffic, while he transacted his affairs at Tonquin.

We had not sailed above three days, when, a great storm arising, we were driven five days to the north-north-east, and then to the east, after which we had fair weather, but still with a pretty strong gale from the west. Upon the tenth day we were chased by two pirates, who soon overtook us; for my sloop was so deep laden, that she sailed very slow, neither were we in a condition to defend ourselves.

We were boarded about the same time by both the pirates, who entered furiously at the head of their men, but finding us all prostrate upon our faces (for so I gave order), they pinioned us with strong ropes, and setting a guard upon us, went to search the sloop.

I observed among them a Dutchman, who seemed to be of some authority, though he were not commander of either ship. He knew us by our countenances to be Englishmen, and jabbering to us in his own language, swore we should be tied back to back, and thrown into the sea. I spoke Dutch tolerably well; I told him who we were, and begged him in consideration of our being Christians and Protestants, of neighbouring countries, in strict alliance,² that he would move the captains to take some pity on us. This inflamed his rage, he repeated his threatenings, and turning to his companions, spoke with great vehemence, in the Japanese language, as I suppose, often using the word *Christianos*.

The largest of the two pirate ships was commanded by a Japanese captain, who spoke a little Dutch, but very imperfectly. He came up to me, and after several questions, which I

answered in great humility, he said we should not die. I made the captain a very low bow, and then turning to the Dutchman, said, I was sorry to find more mercy in a heathen, than in a brother Christian. But I had soon reason to repent those foolish words; for that malicious reprobate, having often endeavoured in vain to persuade both the captains that I might be thrown into the sea (which they would not yield to after the promise made me, that I should not die), however prevailed so far as to have a punishment inflicted on me, worse in all human appearance than death itself. My men were sent by an equal division into both the pirate ships, and my sloop new manned. As to myself, it was determined that I should be set adrift, in a small canoe, with paddles and a sail, and four days' provisions, which last the Japanese captain was so kind to double out of his own stores, and would permit no man to search me. I got down into the canoe, while the Dutchman, standing upon the deck, loaded me with all the curses and injurious terms his language could afford.

About an hour before we saw the pirates, I had taken an observation, and found we were in the latitude of 46 N. and of longitude 183. When I was at some distance from the pirates, I discovered by my pocket-glass several islands to the south-east. I set up my sail, the wind being fair, with a design to reach the nearest of those islands, which I made a shift to do in about three hours. It was all rocky; however I got many birds' eggs, and striking fire I kindled some heath and dry seaweed, by which I roasted my eggs. I ate no other supper, being resolved to spare my provisions as much as I could. I passed the night under the shelter of a rock, strowing some heath under me, and slept pretty well.

The next day I sailed to another island, and thence to a third and fourth, sometimes using my sail, and sometimes my paddles. But not to trouble the reader with a particular account of my distresses; let it suffice, that on the 5th day I

were not ready, nor could he expect to be dispatched in several months. Therefore in hopes to defray some of the charges he must be at, he bought a sloop, loaded it with several sorts of goods, wherewith the Tonquinese usually trade to the neighbouring islands, and putting fourteen men on board, whereof three were of the country, he appointed me master of the sloop, and gave me power to traffic, while he transacted his affairs at Tonquin.

When I was at some distance from the pirates, I discovered by my pocket-glass several islands to the south-east. I set up my sail, the wind being fair, with a design to reach the nearest of those islands, which I made a shift to do in about three hours. It was all rocky; however I got many birds' eggs, and striking fire I kindled some heath and dry seaweed, by which I roasted my eggs. I ate no other supper, being resolved to spare my provisions as much as I could. I passed the night under the shelter of a rock, strowing some heath under me, and slept pretty well.

The next day I sailed to another island, and thence to a third and fourth, sometimes using my sail, and sometimes my paddles. But not to trouble the reader with a particular account of my distresses; let it suffice, that on the 5th day I

arrived at the last island in my sight, which lay south-south-east to the former.

This island was at a greater distance than I expected, and I did not reach it in less than five hours. I encompassed it almost round before I could find a convenient place to land in, which was a small creek, about three times the wideness of my canoe. I found the island to be all rocky, only a little intermingled with tufts of grass, and sweet-smelling herbs. I took out my small provisions, and after having refreshed myself, I secured the remainder in a cave, whereof there were great numbers. I gathered plenty of eggs upon the rocks, and got a quantity of dry seaweed, and parched grass, which I designed to kindle the next day, and roast my eggs as well as I could. (For I had about me my flint, steel, match, and burning-glass.) I lay all night in the cave where I had lodged my provisions. My bed was the same dry grass and seaweed which I intended for fuel. I slept very little, for the disquiets of my mind prevailed over my weariness, and kept me awake. I considered how impossible it was to preserve my life, in so desolate a place, and how miserable my end must be. Yet I found myself so listless and desponding, that I had not the heart to rise, and before I could get spirits enough to creep out of my cave, the day was far advanced. I walked a while among the rocks; the sky was perfectly clear, and the sun so hot, that I was forced to turn my face from it: when all on a sudden it became obscured, as I thought, in a manner very different from what happens by the interposition of a cloud. I turned back, and perceived a vast opaque body between me and the sun, moving forwards towards the island: it seemed to be about two miles high, and hid the sun six or seven minutes, but I did not observe the air to be much colder, or the sky more darkened, than if I had stood under the shade of a mountain. As it approached nearer over the place where I was, it appeared to be a firm substance, the bottom flat, smooth, and shining very bright from the reflection of the sea below. I stood upon a height about two

hundred yards from the shore, and saw this vast body descending almost to a parallel with me, at less than an English mile distance. I took out my pocket-perspective, and could plainly discover numbers of people moving up and down the sides of it, which appeared to be sloping, but what those people were doing, I was not able to distinguish.

The natural love of life gave me some inward motions of joy, and I was ready to entertain a hope, that this adventure might some way or other help to deliver me from the desolate place and condition I was in. But at the same time the reader can hardly conceive my astonishment, to behold an island in the air, inhabited by men, who were able (as it should seem) to raise, or sink, or put it into a progressive motion, as they pleased. But not being at that time in a disposition to philosophize upon this phenomenon, I rather chose to observe what course the island would take, because it seemed for a while to stand still. Yet soon after it advanced nearer, and I could see the sides of it, encompassed with several gradations of galleries, and stairs, at certain intervals, to descend from one to the other. In the lowest gallery, I beheld some people fishing with long angling-rods, and others looking on. I waved my cap (for my hat was long since worn out) and my handkerchief towards the island; and upon its nearer approach, I called and shouted with the utmost strength of my voice; and then looking circumspectly, I beheld a crowd gathered to that side which was most in my view. I found by their pointing towards me and to each other, that they plainly discovered me, although they made no return to my shouting. But I could see four or five men running in great haste up the stairs to the top of the island, who then disappeared. I happened rightly to conjecture, that these were sent for orders to some person in authority upon this occasion.

The number of people increased, and in less than half an hour, the island was moved and raised in such a manner, that the lowest gallery appeared in a parallel of less than an

hundred yards' distance from the height where I stood. I then put myself into the most supplicating postures, and spoke in the humblest accent, but received no answer. Those who stood nearest over-against me seemed to be persons of distinction, as I supposed by their habit. They conferred earnestly with each other, looking often upon me. At length one of them called out in a clear, polite, smooth dialect, not unlike in sound to the Italian; and therefore I returned an answer in that language, hoping at least that the cadence might be more agreeable to his ears. Although neither of us understood the other, yet my meaning was easily known, for the people saw the distress I was in.

They made signs for me to come down from the rock, and go towards the shore, which I accordingly did; and the flying island being raised to a convenient height, the verge directly over me, a chain was let down from the lowest gallery, with a seat fastened to the bottom, to which I fixed myself, and was drawn up by pulleys.

CHAPTER 2

The humours and dispositions of the Laputians described. An account of their learning. Of the King and his Court. The author's reception there. The inhabitants subject to fears and inquietudes. An account of the women.

AT my alighting I was surrounded by a crowd of people, but those who stood nearest seemed to be of better quality. They beheld me with all the marks and circumstances of wonder, neither indeed was I much in their debt, having never till then seen a race of mortals so singular in their shapes, habits, and countenances. Their heads were all reclined either to the right, or the left; one of their eyes turned inward, and the other directly up to the zenith. Their outward garments were

adorned with the figures of suns, moons, and stars,³ interwoven with those of fiddles, flutes, harps, trumpets, guitars, harpsichords, and many more instruments of music, unknown to us in Europe. I observed here and there many in the habit of servants, with a blown bladder fastened like a flail to the end of a short stick, which they carried in their hands. In each bladder was a small quantity of dried pease or little pebbles (as I was afterwards informed). With these bladders they now and then flapped the mouths and ears of those who stood near them, of which practice I could not then conceive the meaning; it seems, the minds of these people are so taken up with intense speculations, that they neither can speak, nor attend to the discourses of others, without being roused by some external taction⁴ upon the organs of speech and hearing; for which reason, those persons who are able to afford it always keep a *flapper* (the original is *climenole*) in their family, as one of their domestics, nor ever walk abroad or make visits without him. And the business of this officer is, when two or more persons are in company, gently to strike with his bladder the mouth of him who is to speak, and the right ear of him or them to whom the speaker addresseth himself. This *flapper* is likewise employed diligently to attend his master in his walks, and upon occasion to give him a soft flap on his eyes, because he is always so wrapped up in cogitation, that he is in manifest danger of falling down every precipice, and bouncing his head against every post, and in the streets, of jostling others or being jostled himself into the kennel.⁵

It was necessary to give the reader this information, without which he would be at the same loss with me, to understand the proceedings of these people, as they conducted me up the stairs, to the top of the island, and from thence to the royal palace. While we were ascending, they forgot several times what they were about, and left me to myself, till their memories were again roused by their *flappers*; for they appeared altogether unmoved by the sight of my foreign habit and

A VOYAGE TO LAPUTA

naturalists agree, at least they were never known to do so in that country.

At the centre of the island there is a chasm about fifty yards in diameter, from whence the astronomers descend into a large dome, which is therefore called *Flandona Gagnole*, or the *Astronomers' Cave*,¹⁴ situated at the depth of an hundred yards beneath the upper surface of the adamant. In this cave are twenty lamps continually burning, which from the reflection of the adamant cast a strong light into every part. The place is stored with great variety of sextants, quadrants, telescopes, astrolabes, and other astronomical instruments. But the greatest curiosity, upon which the fate of the island depends, is a loadstone of a prodigious size, in shape resembling a weaver's shuttle. It is in length six yards, and in the thickest part at least three yards over.¹⁵ This magnet is sustained by a very strong axle of adamant passing through its middle, upon which it plays, and is poised so exactly that the weakest hand can turn it. It is hooped round with an hollow cylinder of adamant, four foot deep, as many thick, and twelve yards in diameter, placed horizontally, and supported by eight adamantine feet, each six yards high. In the middle of the concave side there is a groove twelve inches deep, in which the extremities of the axle are lodged, and turned round as there is occasion.

The stone cannot be moved from its place by any force, because the hoop and its feet are one continued piece with that body of adamant which constitutes the bottom of the island.

By means of this loadstone,¹⁶ the island is made to rise and fall, and move from one place to another. For, with respect to that part of the earth over which the monarch presides, the stone is endued at one of its sides with an attractive power, and at the other with a repulsive. Upon placing the magnet erect with its attracting end towards the earth, the island descends; but when the repelling extremity points downwards, the

island mounts directly upwards. When the position of the stone is oblique, the motion of the island is so too. For in this magnet the forces always act in lines parallel to its direction.

By this oblique motion the island is conveyed to different parts of the Monarch's dominions. To explain the manner of its progress, let AB represent a line drawn cross the dominions of Balnibarbi, let the line cd represent the loadstone, of which let d be the repelling end, and c the attracting end, the island being over C ; let the stone be placed in the position cd with its repelling end downwards; then the island will be driven upwards obliquely towards D . When it is arrived at D , let the stone be turned upon its axle till its attracting end points towards E , and then the island will be carried obliquely towards E ; where if the stone be again turned upon its axle till it stands in the position EF , with its repelling point downwards, the island will rise obliquely towards F , where by directing the attracting end towards G , the island may be carried to G , and from G to H , by turning the stone, so as to make its repelling extremity point directly downwards. And thus by changing the situation of the stone as often as there is occasion, the island is made to rise and fall by turns in an oblique direction, and by those alternate risings and fallings (the obliquity being not considerable) is conveyed from one part of the dominions to the other.

But it must be observed, that this island cannot move beyond the extent of the dominions below, nor can it rise above the height of four miles. For which the astronomers (who have written large systems concerning the stone) assign the following reason: that the magnetic virtue does not extend beyond the distance of four miles, and that the mineral which acts upon the stone in the bowels of the earth, and in the sea about six leagues distant from the shore, is not diffused through the whole globe, but terminated with the limits of the King's dominions; and it was easy from the great advantage of such a superior situation, for a prince to bring

under his obedience whatever country lay within the attraction of that magnet.

When the stone is put parallel to the plane of the horizon, the island standeth still; for in that case, the extremities of it being at equal distance from the earth, act with equal force, the one in drawing downwards, the other in pushing upwards; and consequently no motion can ensue.

This loadstone is under the care of certain astronomers, who from time to time give it such positions as the Monarch directs. They spend the greatest part of their lives in observing the celestial bodies, which they do by the assistance of glasses far excelling ours in goodness. For, although their largest telescopes do not exceed three feet, they magnify much more than those of a hundred with us, and show the stars with greater clearness. This advantage hath enabled them to extend their discoveries much farther than our astronomers in Europe; for they have made a catalogue of ten thousand fixed stars, whereas the largest of ours do not contain above one third part of that number. They have likewise discovered two lesser stars, or *satellites*, which revolve about Mars, whereof the innermost is distant from the centre of the primary planet exactly three of his diameters, and the outermost five; the former revolves in the space of ten hours, and the latter in twenty-one and an half; so that the squares of their periodical times are very near in the same proportion with the cubes of their distance from the centre of Mars, which evidently shows them to be governed by the same law of gravitation, that influences the other heavenly bodies.

They have observed ninety-three different comets, and settled their periods with great exactness. If this be true (and they affirm it with great confidence), it is much to be wished that their observations were made public, whereby the theory of comets, which at present is very lame and defective, might be brought to the same perfection with other parts of astronomy.

The King would be the most absolute prince in the universe, if he could but prevail on a Ministry to join with him; but these having their estates below on the continent, and considering that the office of a favourite hath a very uncertain tenure, would never consent to the enslaving their country.

If any town should engage in rebellion or mutiny, fall into violent factions, or refuse to pay the usual tribute, the King hath two methods of reducing them to obedience. The first and the mildest course is by keeping the island hovering¹⁷ over such a town, and the lands about it, whereby he can deprive them of the benefit of the sun and the rain, and consequently afflict the inhabitants with dearth and diseases. And if the crime deserve it, they are at the same time pelted from above with great stones, against which they have no defence, but by creeping into cellars or caves, while the roofs of their houses are beaten to pieces. But if they still continue obstinate, or offer to raise insurrections, he proceeds to the last remedy, by letting the island drop directly upon their heads, which makes a universal destruction both of houses and men. However, this is an extremity to which the Prince is seldom driven, neither indeed is he willing to put it in execution, nor dare his Ministers advise him to an action, which as it would render them odious to the people, so it would be a great damage to their own estates, that lie all below, for the island is the King's demesne.

But there is still indeed a more weighty reason, why the Kings of this country have been always averse from executing so terrible an action, unless upon the utmost necessity. For if the town intended to be destroyed should have in it any tall rocks, as it generally falls out in the larger cities, a situation probably chosen at first with a view to prevent such a catastrophe; or if it abound in high spires or pillars of stone, a sudden fall might endanger the bottom or under surface of the island, which although it consist as I have said of one entire adamant two hundred yards thick, might happen to

crack by too great a shock, or burst by approaching too near the fires from the houses below, as the backs both of iron and stone will often do in our chimneys. Of all this the people are well apprised, and understand how far to carry their obstinacy, where their liberty or property is concerned. And the King, when he is highest provoked, and most determined to press a city to rubbish, orders the island to descend with great gentleness, out of a pretence of tenderness to his people, but indeed for fear of breaking the adamant bottom; in which case it is the opinion of all their philosophers, that the loadstone could no longer hold it up, and the whole mass would fall to the ground.

About three years before my arrival¹⁸ among them, while the King was in his progress over his dominions, there happened an extraordinary accident which had like to have put a period to the fate of that monarchy, at least as it is now instituted. Lindalino, the second city in the kingdom, was the first his Majesty visited in his progress. Three days after his departure, the inhabitants, who had often complained of great oppressions, shut the town gates, seized on the Governor, and with incredible speed and labour erected four large towers, one at every corner of the city (which is an exact square), equal in height to a strong pointed rock that stands directly in the centre of the city. Upon the top of each tower, as well as upon the rock, they fixed a great loadstone, and in case their design should fail, they had provided a vast quantity of the most combustible fuel, hoping to burst therewith the adamant bottom of the island, if the loadstone project should miscarry.

It was eight months before the King had perfect notice that the Lindalinians were in rebellion. He then commanded that the island should be wafted over the city. The people were unanimous, and had laid in store of provisions, and a great river runs through the middle of the town. The King hovered over them several days to deprive them of the sun and the rain.

He ordered many pack-threads to be let down, yet not a person offered to send up a petition, but instead thereof, very bold demands, the redress of all their grievances, great immunities, the choice of their own Governor, and other the like exorbitances. Upon which his Majesty commanded all the inhabitants of the island to cast great stones from the lower gallery into the town; but the citizens had provided against this mischief by conveying their persons and effects into the four towers, and other strong buildings, and vaults under ground.

The King being now determined to reduce this proud people, ordered that the island should descend gently within forty yards of the top of the towers and rock. This was accordingly done; but the officers employed in that work found the descent much speedier than usual, and by turning the loadstone could not without great difficulty keep it in a firm position, but found the island inclining to fall. They sent the King immediate intelligence of this astonishing event, and begged his Majesty's permission to raise the island higher; the King consented, a general council was called, and the officers of the loadstone ordered to attend. One of the oldest and expertest among them obtained leave to try an experiment. He took a strong line of an hundred yards, and the island being raised over the town above the attracting power they had felt, he fastened a piece of adamant to the end of his line which had in it a mixture of iron mineral, of the same nature with that whereof the bottom or lower surface of the island is composed, and from the lower gallery let it down slowly towards the top of the towers. The adamant was not descended four yards, before the officer felt it drawn so strongly downwards, that he could hardly pull it back. He then threw down several small pieces of adamant, and observed that they were all violently attracted by the top of the tower. The same experiment was made on the other three towers, and on the rock with the same effect.

This incident broke entirely the King's measures and (to dwell no longer on other circumstances) he was forced to give the town their own conditions.

I was assured by a great Minister, that if the island had descended so near the town, as not to be able to raise itself, the citizens were determined to fix it for ever, to kill the King and all his servants, and entirely change the government.

By a fundamental law of this realm, neither the King nor either of his two elder sons are permitted to leave the island,¹⁰ nor the Queen till she is past child-bearing.

CHAPTER 4

The author leaves Laputa, is conveyed to Balmibarbi, arrives at the metropolis. A description of the metropolis and the country adjoining. The author hospitably received by a great Lord. His conversation with that Lord.

ALTHOUGH I cannot say that I was ill treated in this island, yet I must confess I thought myself too much neglected, not without some degree of contempt. For neither Prince nor people appeared to be curious in any part of knowledge, except mathematics and music, wherein I was far their inferior, and upon that account very little regarded.

On the other side, after having seen all the curiosities of the island, I was very desirous to leave it, being heartily weary of those people. They were indeed excellent in two sciences for which I have great esteem, and wherein I am not unversed, but at the same time so abstracted and involved in speculation that I never met with such disagreeable companions. I conversed only with women, tradesmen, *flappers*, and Court-pages, during two months of my abode there, by which at last I rendered myself extremely contemptible, yet these were the only people from whom I could ever receive a reasonable answer.

CHAPTER I

The author sets out as Captain of a ship. His men conspire against him, confine him a long time to his cabin, set him on shore in an unknown land. He travels up into the country. The Yahoos, a strange sort of animal, described. The author meets two Houyhnhnms.

I CONTINUED at home with my wife and children about five months in a very happy condition, if I could have learned the lesson of knowing when I was well. I left my poor wife big with child, and accepted an advantageous offer made me to be Captain of the *Adventure*, a stout merchantman of 350 tons: for I understood navigation well, and being grown weary of a surgeon's employment at sea, which however I could exercise upon occasion, I took a skilful young man of that calling, one Robert Purefoy, into my ship. We set sail from Portsmouth upon the seventh day of September, 1710; on the fourteenth, we met with Captain Pocock of Bristol, at Teneriffe, who was going to the bay of Campechy,¹ to cut logwood. On the sixteenth, he was parted from us by a storm; I heard since my return, that his ship foundered, and none escaped, but one cabin-boy. He was an honest man, and a good sailor, but a little too positive in his own opinions, which was the cause of his destruction, as it hath been of several others. For if he had followed my advice, he might at this time have been safe at home with his family as well as myself.

I had several men died in my ship of calentures,² so that I was forced to get recruits out of Barbadoes, and the Leeward Islands, where I touched by the direction of the merchants who employed me, which I had soon too much cause to repent; for I found afterwards that most of them had been buccaneers. I had fifty hands on board, and my orders were, that I should trade with the Indians in the South Sea, and make what discoveries I could. These rogues whom I had picked up debauched my other men, and they all formed a conspiracy to

seize the ship and secure me; which they did one morning, rushing into my cabin, and binding me hand and foot, threatening to throw me overboard, if I offered to stir. I told them, I was their prisoner, and would submit. This they made me swear to do, and then unbound me, only fastening one of my legs with a chain near my bed, and placed a sentry at my door with his piece charged, who was commanded to shoot me dead, if I attempted my liberty. They sent me down victuals and drink, and took the government of the ship to themselves. Their design was to turn pirates, and plunder the Spaniards, which they could not do till they got more men. But first they resolved to sell the goods in the ship, and then go to Madagascar for recruits, several among them having died since my confinement. They sailed many weeks, and traded with the Indians, but I knew not what course they took, being kept close prisoner in my cabin, and expecting nothing less than to be murdered, as they often threatened me.

Upon the ninth day of May, 1711, one James Welch came down to my cabin; and said he had orders from the Captain to set me ashore. I expostulated with him, but in vain; neither would he so much as tell me who their new captain was. They forced me into the long-boat, letting me put on my best suit of clothes, which were as good as new, and a small bundle of linen, but no arms except my hanger; and they were so civil as not to search my pockets, into which I conveyed what money I had, with some other little necessities. They rowed about a league; and then set me down on a strand. I desired them to tell me what country it was. They all swore, they knew no more than myself, but said, that the Captain (as they called him) was resolved, after they had sold the lading, to get rid of me in the first place where they discovered land. They pushed off immediately, advising me to make haste, for fear of being overtaken by the tide, and bade me farewell.

In this desolate condition I advanced forward, and soon got upon firm ground, where I sat down on a bank to rest myself,

and consider what I had best to do. When I was a little refreshed, I went up into the country, resolving to deliver myself to the first savages I should meet, and purchase my life from them by some bracelets, glass rings, and other toys,³ which sailors usually provide themselves with in those voyages, and whereof I had some about me: the land was divided by long rows of trees, not regularly planted, but naturally growing; there was great plenty of grass, and several fields of oats. I walked very circumspectly for fear of being surprised, or suddenly shot with an arrow from behind or on either side. I fell into a beaten road, where I saw many tracks of human feet, and some of cows, but most of horses. At last I beheld several animals in a field, and one or two of the same kind sitting in trees. Their shape was very singular, and deformed, which a little discomposed me, so that I lay down behind a thicket to observe them better. Some of them coming forward near the place where I lay, gave me an opportunity of distinctly marking their form. Their heads and breasts were covered with a thick hair, some frizzled and others lank; they had beards like goats, and a long ridge of hair down their backs, and the foreparts of their legs and feet, but the rest of their bodies were bare, so that I might see their skins, which were of a brown buff colour. They had no tails, nor any hair at all on their buttocks, except about the anus; which, I presume, Nature had placed there to defend them as they sat on the ground; for this posture they used, as well as lying down, and often stood on their hind feet. They climbed high trees, as nimbly as a squirrel, for they had strong extended claws before and behind, terminating in sharp points, and hooked. They would often spring, and bound, and leap with prodigious agility. The females were not so large as the males; they had long lank hair on their heads, and only a sort of down on the rest of their bodies, except about the anus, and pudenda. Their dugs hung between their fore-feet, and often reached almost to the ground as they walked. The hair of

both sexes was of several colours, brown, red, black and yellow. Upon the whole, I never beheld in all my travels so disagreeable an animal, nor one against which I naturally conceived so strong an antipathy. So that thinking I had seen enough, full of contempt and aversion, I got up and pursued the beaten road, hoping it might direct me to the cabin of some Indian. I had not gone far when I met one of these creatures full in my way, and coming up directly to me. The ugly monster, when he saw me, distorted several ways every feature of his visage, and stared as at an object he had never seen before; then approaching nearer, lifted up his forepaw, whether out of curiosity or mischief, I could not tell. But I drew my hanger, and gave him a good blow with the flat side of it; for I durst not strike him with the edge, fearing the inhabitants might be provoked against me, if they should come to know, that I had killed or maimed any of their cattle. When the beast felt the smart, he drew back, and roared so loud, that a herd of at least forty came flocking about me from the next field, howling and making odious faces; but I ran to the body of a tree, and leaning my back against it, kept them off, by waving my hanger. Several of this cursed brood getting hold of the branches behind leaped up into the tree, from whence they began to discharge their excrements on my head: however, I escaped pretty well, by sticking close to the stem of the tree, but was almost stifled with the filth, which fell about me on every side.

In the midst of this distress, I observed them all to run away on a sudden as fast as they could, at which I ventured to leave the tree, and pursue the road, wondering what it was that could put them into this fright. But looking on my left hand, I saw a horse walking softly in the field, which my persecutors having sooner discovered, was the cause of their flight. The horse started a little when he came near me, but soon recovering himself, looked full in my face with manifest tokens of wonder: he viewed my hands and feet, walking round me

several times. I would have pursued my journey, but he placed himself directly in the way, yet looking with a very mild aspect, never offering the least violence. We stood gazing at each other for some time; at last I took the boldness to reach my hand towards his neck, with a design to stroke it, using the common style and whistle of jockeys when they are going to handle a strange horse. But this animal, seeming to receive my civilities with disdain, shook his head, and bent his brows, softly raising up his left fore-foot to remove my hand. Then he neighed three or four times, but in so different a cadence, that I almost began to think he was speaking to himself in some language of his own.

While he and I were thus employed, another horse came up; who applying himself to the first in a very formal manner, they gently struck each other's right hoof before, neighing several times by turns, and varying the sound, which seemed to be almost articulate. They went some paces off, as if it were to confer together, walking side by side, backward and forward, like persons deliberating upon some affair of weight, but often turning their eyes towards me, as it were to watch that I might not escape. I was amazed to see such actions and behaviour in brute beasts, and concluded with myself, that if the inhabitants of this country were endued with a proportionable degree of reason, they must needs be the wisest people upon earth. This thought gave me so much comfort, that I resolved to go forward until I could discover some house or village, or meet with any of the natives, leaving the two horses to discourse together as they pleased. But the first, who was a dapple-grey, observing me to steal off, neighed after me in so expressive a tone, that I fancied myself to understand what he meant; whereupon I turned back, and came near him, to expect⁴ his farther commands. But concealing my fear as much as I could, for I began to be in some pain, how this adventure might terminate; and the reader will easily believe I did not much like my present situation.

The two horses came up close to me, looking with great earnestness upon my face and hands. The grey steed rubbed my hat all round with his right fore-hoof, and discomposed it so much, that I was forced to adjust it better, by taking it off, and settling it again; whereat both he and his companion (who was a brown bay) appeared to be much surprised; the latter felt the lappet of my coat, and finding it to hang loose about me, they both looked with new signs of wonder. He stroked my right hand, seeming to admire the softness, and colour; but he squeezed it so hard between his hoof and his pastern, that I was forced to roar; after which they both touched me with all possible tenderness. They were under great perplexity about my shoes and stockings, which they felt very often, neighing to each other, and using various gestures, not unlike those of a philosopher, when he would attempt to solve some new and difficult phenomenon.

Upon the whole, the behaviour of these animals was so orderly and rational, so acute and judicious, that I at last concluded, they must needs be magicians, who had thus metamorphosed themselves upon some design, and seeing a stranger in the way, were resolved to divert themselves with him; or perhaps were really amazed at the sight of a man so very different in habit, feature, and complexion from those who might probably live in so remote a climate. Upon the strength of this reasoning, I ventured to address them in the following manner: Gentlemen, if you be conjurers, as I have good cause to believe, you can understand any language; therefore I make bold to let your Worships know, that I am a poor distressed Englishman, driven by his misfortunes upon your coast, and I entreat one of you, to let me ride upon his back, as if he were a real horse, to some house or village, where I can be relieved. In return of which favour, I will make you a present of this knife and bracelet (taking them out of my pocket). The two creatures stood silent while I spoke, seeming to listen with great attention; and when I had ended,

they neighed frequently towards each other, as if they were engaged in serious conversation. I plainly observed that their language expressed the passions very well, and the words might with little pains be resolved into an alphabet more easily than the Chinese.

I could frequently distinguish the word *Yaboo*, which was repeated by each of them several times; and although it were impossible for me to conjecture what it meant, yet while the two horses were busy in conversation, I endeavoured to practise this word upon my tongue; and as soon as they were silent, I boldly pronounced *Yaboo* in a loud voice, imitating, at the same time, as near as I could, the neighing of a horse; at which they were both visibly surprised, and the grey repeated the same word twice, as if he meant to teach me the right accent, wherein I spoke after him as well as I could, and found myself perceivably to improve every time, although very far from any degree of perfection. Then the bay tried me with a second word, much harder to be pronounced; but reducing it to the English *orthography*, may be spelt thus, *Houyhnhnm*.^s I did not succeed in this so well as the former, but after two or three farther trials, I had better fortune; and they both appeared amazed at my capacity.

After some farther discourse, which I then conjectured might relate to me, the two friends took their leaves, with the same compliment of striking each other's hoof; and the grey made me signs that I should walk before him; wherein I thought it prudent to comply, till I could find a better director. When I offered to slacken my pace, he would cry *Hhuun*, *Hhuun*; I guessed his meaning, and gave him to understand, as well as I could, that I was weary, and not able to walk faster; upon which, he would stand a while to let me rest.
