

STATIC-2002R TRAINING: HOW TO CODE, INTERPRET, AND REPORT STATIC-2002R SCORES

Leslie Helmus, M.A.
Correctional Services Canada

Friday 31st August, 9.30am-5pm

Student Rate: £65

Non-Student Rate: £130

LIMITED PLACES

To register visit <http://www.kent.ac.uk/psychology/core-fp/workshops.html> by August 10th

The assessment of sex offenders' risk of reoffending is a cornerstone of rehabilitation and reintegration. *Static-2002R* is an actuarial method combining easily available information about individual sex offenders to assess the risk of sexual, violent, and general recidivism. The Centre of Research and Education in Forensic Psychology (CORE-FP) has the extraordinary opportunity to offer training from **Leslie Helmus**, one of only four certified *Static-2002R* trainers worldwide, and the only training session to be held in the UK. This workshop will suit those involved in risk assessment with sexual offenders or those hoping to develop skills in this area (familiarity with *Static-99* or any other risk measures is not required). For individuals already using risk measures such as the *Static-99* or *Risk Matrix 2000* it is worth noting that a combination of static risk scales may incrementally improve decisions. Students will be interested to know that while other risk measures may be more common in the UK, the *Static* measures are the most widely used actuarial risk assessment scales in North America and have the most research validations. The workshop will provide background information on the *Static-2002R* and will teach participants how to score, report, and interpret *Static-2002R* in applied evaluations. Lunch included.
