

How we assess mathematics students: a survey and case studies.

Findings from the MU MAP Project

This workshop will present findings from the MU MAP Project:
Mapping University Mathematics Assessment Practices.

MU MAP (supported by the MSOR Network through the Mathematical Sciences HE Curriculum Innovation Project) surveyed assessment practices across university mathematics in the UK and developed resources in the form of case studies of assessment of mathematics at undergraduate level. In the workshop we will present results from a survey of assessment methods in UG mathematics, and invite mathematics lecturers who took part in the project to present their case studies of assessment. We will also discuss the costs and effects of the change in assessment practice in the light of the case studies presented.
